26.2 RPG Series by Valhaimerd

A player guide to the major mechanics, character progression, exploration, survival, and everyday controls in this pack.

Author: Valhaimerd

Pack: Minecraft 26.2 · NeoForge 26.2.0.90

Edition: October 2026

Distribution: 305 synchronized JARs · 26 client extras

Last audited: 2026-11-04
Pack target: Minecraft 26.2 with NeoForge 26.2.0.90
Current distribution: 305 synchronized JARs plus 26 client-store JARs

About this handbook

This guide starts with the systems that most change a playthrough and ends with the complete controls reference. Featured Mechanics gives the full walkthrough for major mods; Parts III–VI provide a quicker reference to the rest of the pack, grouped by what players do with them. Each entry names its core mechanic, offers a practical cue, and links to the mod's project page when one is public.

The alphabetical index finds a mod by name, while the gameplay-tag index groups mods by shared activities. Use those indexes to jump into a category, then follow the official page link when you need the complete item or configuration reference. Libraries, APIs, and invisible server internals stay outside the gameplay catalogue.

How entries are organized

Each part opens with the role its systems play in a new world. Distinct category bars and inset icon entries make the relationships visible without repeating a full walkthrough for every mod. A short category paragraph closes each group; featured mechanics remain fully explained in Part I.

Entry types: Core system; Integrated expansion; Focused content; Utility; Interface feature; Optional client feature.

Cross-reference tags: Combat; Character; Skills; Magic; Equipment; Bosses; Events; World Generation; Structures; Creatures; Companions; Farming & Food; Building; Storage; Travel; Multiplayer; Controls; HUD; Audio and Atmosphere.

Table of Contents

Alphabetical mod index 3
Gameplay-tag index 4
Quick Reference 5
Part I — Featured Mechanics 6
- Races, RPG classes, and Astral Dimension 7
- Party, The Sift, archeology, and enchantments 8
- World map, caves, Nether, and End 10
- Fishing and Chrono Dawn 12
- Cooking and alchemy 13
- Backpacks, storage, and player trade 14

Part II — Character and Core Systems 16
- Races and racial traits 16
- Classes and playstyles 17
- Skill trees and character progression 20
- Abilities, spells, runes, and resources 22
- Combat controls and dodge rolling 22
- Weapons, armor, jewelry, and relics 23
- Enchanting and equipment improvement 28
- Death, revival, graves, and respawning 30
- Parties and multiplayer cooperation 32

Part III — Adventure and Challenge 33
- Travel, maps, compasses, and teleportation 33
- Xaero's World Map 35
- Integrated world and dimension expansions 35
- Alex's Caves 35
- Fishing and collection systems 38
- Starcatcher 38
- Companions, pets, villagers, and settlements 38
- Pet Vault 40
- Bosses and major encounters 41
- Invasions and wave events 42
- Dangerous nights and environmental threats 43
- Structures and dungeons 44
- Creatures and hostile mobs 49

Part IV — Survival and Creation 53
- Resource gathering and repetitive actions 53
- Farming, food, and cooking 53
- Potions and alchemy 56
- Building and decoration 57
- Storage and inventory management 59
- Item transport and logistics 60
- Vehicles and travel equipment 61
- Trading and multiplayer economy 62

Part V — Interface and Reference 63
- Information overlays and tooltips 63
- Recipe and loot information 65
- HUD changes and customization 66
- Cosmetic and animation changes 67
- Optional client features 69

Part VI — Keybinds and Configuration 72
- Essential keybinds and conflict resolution 72

Quick Reference

Use this page to begin a new world. Featured Mechanics explains the major systems first; the complete keybind reference is at the end for setup or troubleshooting.

Major systems that change how you play

- **Build an RPG character:** choose a lasting race, assemble a flexible weapon-and-book loadout, then grow it through skill trees, spells, runes, and gear. Start with Choosing a class and Skill trees and character progression.
- **Connect gear and progression:** Curios holds pack-provided accessories and the cosmetic layer, while Penchant lets eligible enchantments grow as you use their gear. See Curios slots and vanity cosmetics and Penchant.
- **Explore with intent:** use the explored-terrain map to plan routes, then follow the Cave Codex and Cave Map to find Alex's Caves. See Xaero's World Map and Alex's Caves.
- **Prepare for longer dimensions:** Astral Dimension branches into the Setback after its Void bosses; Chrono Dawn begins with a one-way portal until you stabilize it. Read Astral Dimension and Chrono Dawn before crossing either portal.
- **Build a collection loop:** Starcatcher makes fishing depend on location and fish conditions, with gear, a minigame, and a catalogue. See Starcatcher.
- **Bring companions safely:** Pet Vault stores and summons owned pets, while Pet Status helps check their health and last-known location. See Pet Vault.

First ten minutes

1. Compare the eight Iourus racial traits and choose a lasting race. Press `P` to reopen the race menu and read each option.
2. Equip a class book with a matching weapon. Changing the loadout changes your role, so try a few combinations.
3. Open the skill tree with `T` and read node requirements before spending points. Test your equipped spell or attack against an easy target.
4. Open the world map with `M`, mark a route, and keep coordinates visible with `N`. Check the Cave Codex before hunting for Alex's Caves.
5. Pack food and storage for the trip. For multiplayer, open Better Party from its inventory button before entering a dangerous area.

Controls when you need them

The recommended profile uses `T` for skills, `M` for the world map, `N` for coordinates, `G` for the emote wheel, `V` for the equipped backpack, and `E` for a combat roll. Better Party opens from its inventory button. In JEI, left-click shows recipes and right-click shows uses. Curios opens from the inventory button. If a binding conflicts, use the complete controls reference at the end; press **Esc** while editing a binding to leave it unbound.

Screen layout

Place Paper Doll at the upper-left with Coordinates Display immediately below it, and keep Better Party as a vertical roster on the right. This keeps the center clear and prevents those three overlays from covering one another. See HUD changes and customization for the layout diagram and setup notes.

Part I — Featured Mechanics

These systems change how you build a character, explore, survive, and manage your world. Choose a tile to jump to its mechanics below.

Iourus Races

Lasting strengths, traits, and tradeoffs.

RPG Series

Six builds from weapons and class books.

Astral Dimension

Two realms and a multi-boss Void journey.

Better Party

Roles, shared XP, and a group HUD.

The Sift

Awaken an Ancient City portal and explore a strange realm.

Better Archeology

Brush fossils and identify ancient artifacts.

Penchant

Enchantments grow as gear is used.

Xaero's World Map

A map of the terrain you have explored.

Alex's Caves

Rare biomes below the Overworld.

Better Nether

New Nether terrain, life, and loot.

Better End

New End biomes, resources, and creatures.

Starcatcher

Condition-based fishing and collecting.

Chrono Dawn

A time-locked dimension and boss progression.

Farmer's Delight

Prepare, cook, and serve better meals.

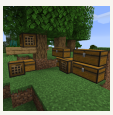

Alchemia

Discover potion effects through ingredients.

Sophisticated Backpacks

Portable storage with useful upgrades.

Tom's Simple Storage

Search connected containers together.

Market Board

A shared player marketplace.

Iourus Races

- **Identity:** The installed build offers Human, Elf, Dwarf, Orc, Goblin, Melfork, Draconic, and the locally added Asgardian race.
- **Mechanics:** Each race changes attributes, passive strengths, and drawbacks; the choice affects play beyond appearance.
- **Progression:** Race is saved with the character, while class remains a separate equipment choice.
- **Asgardian:** 22 HP; 10% larger and 5% slower; +2% melee, ranged and magic damage. Lightning strikes cannot hurt them, but magic deals 10% more damage. Ragnarok shattered their ancestral wards.

Choosing a race

1. At the selection screen, compare every race's listed strengths, weaknesses, attributes, and passive traits. The installed build offers eight options.
2. Choose for the playstyle you want to keep. The author describes elves as mobile, orcs as combat-focused, dwarves as resilient, and humans as versatile; inspect the game for the exact current traits.
3. After confirming, build an equipment-based class around that foundation. A class can change with gear, but an ordinary player cannot freely replace a confirmed race.

A race affects survival and combat beyond appearance. Resetting one requires an administrator, so read the full selection before committing.

> **Quick tip** Pick for lasting traits; you can change class gear later.

Mechanics source: official mod page.

RPG Series

- **Classes:** Archer, Paladin, Priest, Rogue, Warrior, and Wizard are equipment-based playstyles in this pack.
- **Loadout:** Weapons and class books determine the abilities you can use; swapping them changes your active role.
- **Spellcasting:** Spell Engine supplies the ability bar, cooldowns, and rune costs for applicable skills.
- **Growth:** Specialized weapons, armor, and spell books deepen each archetype rather than locking your character to one class.

Building a class loadout

1. Choose an archetype: Archer for ranged play, Paladin for protection, Priest for healing, Rogue for mobile melee, Warrior for heavy melee, or Wizard for magic.
2. Pair its weapon with a class book. Use a Spell Binding Table to make books, then equip one in the Curios spell-book slot.
3. Hold the compatible weapon to reveal Spell Engine abilities. Follow the keys shown on the ability bar and carry runes for spells that consume them. Bypass Spell Hotbar is unbound in this profile; assign it in Controls if you want a manual override for the ordinary hotbar.
4. Add class armor, skill nodes, and accessories that reinforce the same role.

There is no permanent class-selection screen. If an ability fails, check the weapon, book, runes, target, and cooldown before changing the build.

> **Quick tip** If the ability bar is empty, check both the class book and held weapon.

Mechanics source: official mod page.

Astral Dimension

- **Entry:** Build a Nether-shaped frame with at least ten Glowing Obsidian blocks and ignite it with Glint and Steel.
- **Exploration:** The Astral realm has ten biomes, dangerous Void Liquid, unusual creatures, and scattered structures; bring an Elytra and a safe return route.
- **Progression:** Astral Eyes, the Amethyst Sanctuary, Void materials, and the Void Egg lead to the Void Titan.
- **Next realm:** The later Setback dimension opens with Gloomy Obsidian and a Nanta Star, continuing the boss and gear progression.

From the portal to the Void Titan

1. Make the Glowing Obsidian portal, activate it with Glint and Steel, and mark your arrival point on Xaero's map. Void Liquid and broken terrain make flight and spare supplies valuable.
2. Explore the Fiery Forest for Burning Orbs. Their shards, four Glowstone Dust, and an Ender Pearl make an Astral Eye. Prepare at least four Eyes for the Amethyst Sanctuary.
3. At the Sanctuary, use the Eyes on the Postrum Eyes, defeat the four Amethyst Knights, and use their keys to reach Broken Amethyst Shards.
4. Mine Void Ore between Y -40 and -12 for Void Gems, and fight Void Menaces for four Void Fangs. Use these materials for a Void Pillar and Astral Altar, then place them at a Void Egg's portal to summon the Titan.
5. After the Titan, search the Tormented Mansion and its Void Visage encounter. The later Setback portal requires ten Gloomy Obsidian and a Nanta Star; enter with upgraded gear.

This pack contains an Astral Dimension 3.0 build ported to Minecraft 26.2. The public project page currently lists other game versions, so use the installed recipes and JEI for any details that differ. The two realms form a long expedition: establish a safe foothold, collect boss-gating materials, then tackle each structure in order.

> **Quick tip** Set a map waypoint at the Astral portal before crossing broken terrain.

Mechanics source: official mod page.

Better Party

- **Groups:** Create public, invite-only, or password-protected parties with leader, officer, and member roles.
- **Cooperation:** Party chat, a live roster, member locator, and optional friendly-fire protection help groups travel and fight together.
- **Shared XP:** Nearby experience can be divided among eligible members when the server permits it.
- **Control:** Leaders set party rules within server limits; each player can adjust their own HUD.

Playing as a group

1. Open the party menu from its inventory button. Create or join a public, invite-only, or password-protected group.
2. Assign leader, officer, and member roles. The leader can adjust access and, when the server permits, friendly fire, nearby XP sharing, and the member locator.
3. Use `/p <message>` for party chat. Keep the live roster visible, and move or scale it in personal HUD settings if it covers combat.
4. Check the sharing radius before splitting up; members outside it may not receive XP.

Party membership can persist across restarts. Server rules set the limits, while each player controls only their own HUD layout.

> **Quick tip** Set the roster where it stays visible without covering combat.

Mechanics source: official mod page.

Mielon's The Sift

- **Entry:** An Ancient City portal opens through a Singer's melody and eight Note Blocks on Sonorous Deepslate.
- **Exploration:** The Sift has ten biomes, living sculk, unfamiliar creatures, abandoned portals, and restorative Ichor.
- **Travel:** Temporary Rifts connect the realm and Overworld for five minutes; do not depend on one as a permanent return route.
- **Rewards:** Siftite upgrades Netherite gear, while Charoite changes enchanting choices.

From Ancient City to first expedition

1. Find an Ancient City with Sonorous Deepslate near its Reinforced Deepslate frame. Play a Goat Horn in the city center to summon a Singer and awaken the eight blocks.
2. Put a Note Block on each awakened block. Right-click to set notes 1 through 8, then left-click the blocks in this order: **1, 3, 7, 6, 5, 2, 4, 8**. The order played matters, not where the blocks stand.
3. Mark the portal and enter prepared for a long trip. Follow the mod's advancement tab for its creatures, materials, and Ichor. Ichor grants regeneration on contact but slows movement slightly.
4. Search abandoned portals for supplies and rare upgrade materials. Use Siftite with Netherite gear and a Siftite Upgrade Smithing Template; compare Charoite enchanting against ordinary lapis before spending levels.

Natural Rifts may appear after time in The Sift, but they close after five minutes. Keep a reliable route to the Ancient City portal and use a map marker before exploring farther. This pack uses a community NeoForge 26.2 port and requires NeoForge **26.2.0.90 or newer**; check JEI and in-game advancements if a port detail differs from the upstream guide.

> **Quick tip** The portal melody is 1–3–7–6–5–2–4–8; mark your way home before chasing a Rift.

Mechanics source: official mod page.

Better Archeology

- **Sites:** New structures and fossil sites turn ordinary exploration into archeological expeditions.
- **Brushing:** Suspicious blocks and fossiliferous dirt can reveal artifact shards and fossil pieces.
- **Artifacts:** Combine shards into an unidentified artifact, then analyze it at an Archeology Table with a brush.
- **Rewards:** Identified artifacts can provide special enchantments; completed fossils can also serve as displays.

From a dig site to an artifact

1. Carry a brush while exploring ruins, old graves, and fossil sites. Look for suspicious blocks, pots, and fossiliferous dirt before breaking the surrounding terrain.
2. Brush promising blocks to collect finds. Fossil pieces come from fossiliferous dirt at their respective sites; artifact shards can come from pots and suspicious blocks.
3. Gather enough shards for an unidentified artifact. Use a brush at an Archeology Table to reveal the artifact, then inspect its effect and equipment requirements.
4. Assemble fossil pieces for a collection or display. Check JEI for the installed recipes before spending rare finds.

Bring spare brushes and mark promising sites on the world map so you can return after clearing your inventory. The mod adds structures to world generation, so search unexplored chunks for new sites in an existing world.

> **Quick tip** Brush the dig site before mining through it; fragile clues may be lost when blocks are broken.

Mechanics source: official mod page · author's guide.

Penchant

- **Leveling:** Eligible enchantments begin at level one and improve as enchanted gear is used.
- **Progress:** Mining, attacking, or taking armor damage fills a separate bar for each enchantment. This pack's progression target is 40% of the original, so levels arrive about 2.5 times faster.
- **Limit:** A full bar raises that enchantment by one level until its maximum is reached. Unbreaking reaches X; full saved bars on carried/worn gear reconcile automatically. On armor it avoids 8% of durability loss per level, reaching 80% at X (about five times the lifespan). Weapons and tools keep their existing Unbreaking formula.
- **Modules:** Per-world datapacks can also rework tables, bookshelves, durability, loot, and anvils.

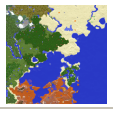

Growing an enchantment

1. Enchant a tool, weapon, or armor piece. Eligible enchantments begin at level one.
2. Use it in ways that normally cost durability: mine, attack, or take armor damage. Each enchantment fills its own bar.
3. Hover the gear and hold `Left Shift` to inspect progress. A full bar raises one enchantment level and resets until the maximum is reached.
4. Check the world's Data Packs screen before relying on any optional table, bookshelf, durability, anvil, or loot changes.

The pack's new-world modules. Table Rework offers selectable enchantments with XP and bookshelf requirements and a one-lapis application cost. Bookshelf Placement counts shelves in a wider area and can use enchanted books stored nearby to reveal more choices. Durability Rework changes Mending and Unbreaking; No Anvil Books prevents books from being applied to gear in an anvil. Loot Rework and Guaranteed Drops alter where enchanted equipment appears. Existing worlds keep their saved module selection, and items without durability may not gain progress.

> **Quick tip** Hover enchanted gear and hold `Left Shift` to see its individual progress bars.

Mechanics source: official mod page.

Xaero's World Map

- **Discovery:** The full-screen map records terrain that has been explored.
- **Navigation:** Pan and zoom to compare landmarks, terrain, and possible routes between known places.
- **Waypoints:** Mark important destinations and return points for later journeys.
- **Limit:** Unvisited space stays blank; the map does not reveal hidden terrain ahead of exploration.

Planning a route

1. Open the full-screen world map with `M`, then pan and zoom through terrain already explored.
2. Mark home, portals, bases, and important structures with waypoints. Compare known landmarks before choosing a route.
3. Keep coordinates visible with `N` when a precise return point matters, especially before entering a cave or another dimension.
4. Use Nature's Compass or Explorer's Compass to seek an undiscovered biome or structure. Blank map areas do not reveal them.

The map is a memory of travel, not a preview of unexplored land. It becomes more useful as paths and waypoints accumulate.

> **Quick tip** Mark the return route with a waypoint before entering a new area.

Mechanics source: official mod page.

Alex's Caves

- **Worlds below:** Six rare cave biomes have distinct creatures, materials, hazards, and equipment.
- **Discovery:** Underground Cabins contain Cave Tablets and a guide; translation leads to a Cave Codex and Cave Map.
- **Preparation:** Each biome asks for different supplies and tactics, from hazardous terrain to unusual creatures.
- **Rewards:** Exploration opens new resources, gear, and creature encounters rather than just another ore layer.

Finding a rare cave

1. Search the Overworld for an Underground Cabin. Its barrels contain Cave Tablets, and the Cave Compendium explains the discovery system.
2. Put a Cave Tablet and paper in the Spelunkery Table. Solve three translation levels, each with five guesses, to produce a Cave Codex; a failed or interrupted translation consumes the tablet. Craft the codex with paper into its Cave Biome Map.
3. Read the map before descending. Magnetic, Primordial, Toxic, Abyssal, Forlorn, and Candy caves have different creatures, hazards, and resources.
4. Bring supplies for the named cave. If equipped Alex's Caves gear grants a special ability, assign Alex's Caves Special Ability in Controls to activate it; this profile leaves it unbound.

Use the Cave Codex to unlock biome chapters in the Cave Compendium before spending it on a map. Each cave is a destination with its own rules rather than another ordinary ore layer.

> **Quick tip** Read the Cave Codex before crafting it into a map.

Mechanics source: official mod page.

Better Nether

- **Biomes:** New Nether landscapes include vegetation, materials, and vertical biome variation.
- **Encounters:** Creatures, dungeons, and rare cities add reasons to explore beyond a fortress.
- **Resources:** New plants, foods, tools, and blocks can be gathered or farmed.
- **Generation:** Terrain changes appear in newly generated chunks, leaving already visited terrain intact.

Exploring the changed Nether

1. Mark the portal and carry food, spare equipment, and a return route before crossing unfamiliar terrain.
2. Explore beyond fortresses. New biomes hold plants, materials, creatures, dungeons, and rare Nether Cities.
3. Bring home useful flora and resources for tools, building, and farms. Some materials can be grown or gathered repeatedly.
4. After a pack update, travel into new chunks to see new generation; visited terrain stays as it was.

Better Nether varies biomes vertically as well as across the map. Routes at different heights can expose different terrain and dangers.

> **Quick tip** Mark your portal as soon as you arrive in unfamiliar terrain.

Mechanics source: official mod page.

Better End

- **World generation:** The End gains many new biomes, varied island shapes, caves, and structures.
- **Exploration:** New plants, blocks, resources, and creatures distinguish the biomes.
- **Equipment:** End materials support new tools, armor, weapons, and building choices.
- **Existing worlds:** Travel into new chunks to find newly generated terrain.

Exploring the changed End

1. Prepare for the dragon and establish a safe route through the central island before leaving it.
2. Cross into unexplored islands and survey each biome for its terrain, plants, creatures, and resources.
3. Bring home new materials to explore their recipes and equipment options in the recipe interface.
4. Mark a return route before crossing large gaps or descending into caves.

Better End focuses on End exploration and resources. Its world generation changes newly visited areas; already generated chunks keep their existing terrain.

> **Quick tip** Mark a return route while exploring the new islands.

Mechanics source: official mod page.

Starcatcher

- **Fish collection:** More than 100 fish have their own biome, weather, time, elevation, and other conditions.
- **Tackle:** Hooks, bobbers, and bait modify which catches are possible.
- **Fishing:** A skill-based minigame replaces passive waiting for many catches.
- **Long-term goals:** The catalogue, trophies, displays, aquariums, and tournaments reward varied catches.

First catch and collection loop

1. The current profile awards the guide on joining a world. If you still need a Starcatcher rod, fish once with a vanilla rod; the profile also awards the rod on that first catch.
2. Open the guide with `Ctrl + Space`. Read its help pages and a target fish's biome, dimension, weather, time, elevation, and other conditions.
3. Fit the rod with suitable hooks, bobbers, and bait. A Tackle Box stores fish and helps organize attachments.
4. Cast and follow the on-screen minigame. Press `Space` for **Minigame Hit**; different fish can change the pattern and difficulty.
5. Record the catch in the catalogue, then keep it, display it, cook it, or sell it. Trophies, secrets, and tournaments give longer goals.

This profile hides uncaught fish entries and shares catches with online FTB Team members. Changing location or tackle often matters more than repeated casts at one spot.

> **Quick tip** Check fish conditions in the guide before changing bait or casting again.

Mechanics source: official mod page.

Chrono Dawn

- **Entry:** Find Ancient Ruins in the Overworld, gather Clockstone, and activate a Clockstone portal with a Time Hourglass.
- **Travel rule:** The first crossing is one-way. Find the Forgotten Library and a Portal Stabilizer to enable travel back.
- **World:** Eleven time-themed biomes, slowed hostile mobs, new creatures, dungeons, and equipment fill the dimension.
- **Goal:** Four dungeon bosses supply a Chrono Aegis; the Time Guardian and Master Clock lead to the Time Tyrant.

A safe first Chrono Dawn expedition

1. Search taiga or dark forest for Ancient Ruins. For a directed search, mine Overworld Chronite Ore, craft a Time Compass, and follow it to the nearest ruins.
2. Gather Clockstone and build a portal frame at least 4 by 5 blocks; activate it with a Time Hourglass. Pack food, tools, and a way to survive in the dimension because entry initially has no return trip.

3. Read the Chronicle guidebook given on arrival. Find the Forgotten Library for the Portal Stabilizer recipe, then gather Enhanced Clockstone from a Desert Clock Tower and stabilize the portal for two-way travel.
4. Explore Guardian Vault, Clockwork Depths, Phantom Catacombs, and Entropy Crypt. Their bosses drop the four materials for a Chrono Aegis, which grants a timed advantage against the final boss.
5. Defeat the Time Guardian for the Master Clock Key, open the Master Clock, and face the Time Tyrant. Its Stasis Core fragments support later time-themed artifacts.

The dimension changes combat pacing because hostile mobs move slowly, but dungeon bosses still demand preparation. The guidebook and the installed JEI recipes are the best references while progressing; place a waypoint at the portal once return travel is unlocked.

> **Quick tip** Treat the first portal crossing as a one-way expedition until you have a Portal Stabilizer.

Mechanics source: official mod page.

Farmer's Delight

- **Ingredients:** Crops and gathered foods broaden what can be prepared.
- **Preparation:** Knives and Cutting Boards turn raw ingredients into recipe components.
- **Cooking:** Stoves, skillets, and Cooking Pots handle different dishes and batch meals.
- **Serving:** Some cooked foods need containers, while feasts provide portions in the world.

From harvest to meal

1. Grow crops or gather ingredients, then inspect a desired dish in JEI for its workstation and serving container.
2. Use a Knife and Cutting Board for ingredients that need a cutting recipe.
3. Heat a Stove, Skillet, or Cooking Pot for the relevant dish. A pot can prepare several servings and may need bowls or other containers.
4. Serve the meal or place a feast for shared portions. Rich soil and crop systems can sustain the kitchen's ingredient supply.

Cooking is a chain of preparation, heat, and serving rather than a single crafting recipe. Similar dishes may need different stations, so follow the recipe display.

> **Quick tip** Start with the finished dish in JEI and follow its required station backward.

Mechanics source: official mod page.

Alchemia

- **Setup:** A vanilla cauldron over a lit campfire becomes an Alchemical Cauldron.
- **Brewing:** Each ingredient moves the mixture along a path on a radial map of potion effects.
- **Results:** Landing near an effect adds it; proximity affects potency, and a brew can carry multiple effects.
- **Discovery:** The map is generated per world, so memorized recipes from another world may not work.
- **Guide:** An Alchemist's Guide records discovered effects, ingredients, and paths for repeat brewing.

Brewing by ingredient path

1. Place a vanilla cauldron over a lit campfire to make an Alchemical Cauldron, then add water and ingredients.
2. Watch the radial map as each ingredient moves the potion along a path. Land near the desired effect; closeness affects potency.
3. Continue carefully to combine effects. The last effect added is generally the strongest.
4. Bottle the result with glass bottles; a full cauldron yields four bottles.
5. Craft an Alchemist's Guide with a book and an ingredient. It records discoveries and paths; select a saved recipe, then sneak-right-click the cauldron to repeat it.

The effect map is generated per world, so a recipe from another save may lead somewhere else. Experiment in small batches before brewing expedition supplies.

> **Quick tip** Save a successful ingredient path in the Guide before brewing in bulk.

Mechanics source: official mod page.

Sophisticated Backpacks

- **Capacity:** Backpack tiers add storage and upgrade slots as materials improve.
- **Upgrades:** Modules can collect drops, filter contents, refill supplies, or add crafting and other utilities.
- **Placement:** A backpack can travel with you or be placed and connected to inventory automation.
- **Customization:** Dye colors and upgrade configurations help dedicate packs to different jobs.
- **Death rule:** A Sophisticated Backpack goes to the grave even when carried in the hotbar, offhand, armor, or Curios.

Preparing a travel pack

1. Obtain a backpack and upgrade its tier as you need more storage and upgrade slots.
2. Choose modules for the job: Pickup gathers drops, filters control contents, Refill maintains supplies, and Crafting adds a work surface.
3. Open the equipped pack with `V` and configure its upgrades before an expedition.
4. Dye separate packs for mining, building, or travel. A placed pack can also interact with hoppers and inventory automation.

Automation follows each upgrade's filter, so inspect settings before carrying valuable items. Feeding and Alchemy pause for downed players, preserving food and drinks until rescue. The pack's tier controls its available capacity and upgrade choices. After a death, recover the backpack from the grave; its equipped position does not exempt it.

> **Quick tip** Configure Pickup and filter upgrades before your next loot run.

Mechanics source: official mod page.

Tom's Simple Storage

- **Network:** Inventory Connectors link ordinary chests and other containers into one view.
- **Terminal:** A searchable interface displays and accesses items across connected inventories.
- **Crafting:** A crafting terminal can combine item access with recipe assembly.
- **Expansion:** Cables, filtered connectors, and wireless terminals extend the basic network.

Building a storage network

1. Put an Inventory Connector beside a group of ordinary containers and attach a Storage Terminal.
2. Add connectors and cables as the storage room grows. Items stay in physical containers while the terminal shows a searchable view.
3. Use the terminal to find and withdraw supplies. A Crafting Terminal combines storage access with recipe assembly.
4. Add filters to control connected inventories; a wireless terminal can extend access when built and configured.

Start with a few chests and confirm each appears in the terminal before expanding. The network organizes a base, while a backpack carries supplies away from it.

> **Quick tip** Confirm each chest appears in the terminal before adding more cables.

Mechanics source: official mod page.

Market Board

- **Listings:** Players offer items to other players through a shared board.
- **Trade:** Buyers search and sort offers; sellers manage listings and collect proceeds.
- **Currency:** A standard board uses one configured currency; Market Board Plus can support several registered currencies.
- **Limits:** Listing counts and accepted currencies are controlled by the server.

Buying and selling with players

1. Place a Market Board and right-click it to browse shared listings. Search and sort before buying, and check item quantities.
2. Sneak-right-click to manage your listings, remove an offer, or collect proceeds from a sale.
3. Confirm the configured currency and price before listing. The standard board uses one currency; Market Board Plus can accept several registered currencies.
4. Collect returned unsold goods when an offer expires, and leave inventory space for purchases and recovered items.

Boards of the same type share market data across the world. Listing limits, currencies, and expiration behavior follow server settings.

> **Quick tip** Double-check currency, quantity, and price before posting a listing.

Mechanics source: official mod page.

Part II — Character and Core Systems

A character develops through several connected choices. Iourus Races supplies a lasting identity, while RPG Series class books and weapons define a role that can change with the loadout. Skill trees, spells, runes, and combat controls then refine how that role feels in play. Read equipment as a complete build: an armor set, a Curios accessory, or a weapon effect may matter more than one displayed armor or damage value.

Progress continues through enchantment use, exploration rewards, and specialized gear. Survival systems also shape the build: a party can rescue a downed player, graves protect recovery, and food or healing changes determine how long a fight remains sustainable. The entries below are quick references; Part I gives the full walkthrough for the featured systems.

Races and racial traits

Iourus Races

- **Type:** Character foundation
- **Core mechanic:** Eight persistent identities alter strengths, weaknesses, attributes, and passive behavior.
- **Player guidance:** Compare the eight race descriptions before confirming a lasting choice.

A race changes the traits you carry through the whole playthrough. It does not lock you into a particular RPG class. Elf now has 8% faster base movement and +5 safe fall distance. Falling speed is normal; longer falls still deal damage. It has no racial projectile-damage bonus. Goblin size is 75% of normal; Asgardian size is 110%, with no mining-speed bonus. Dwarf gains 2 armor. Elf has no racial night vision; Goblin retains it and Melfork gains it only underwater. Leaves are solid for every race. Elf and Goblin can climb leaf walls, including recognized modded leaves. Other walls require Spider Legs from Nameless Trinkets; ladders and vines still work normally. Race changes clean up prior racial attributes and water bonuses before applying the new identity. The Orb of Oblivion resets your race and opens selection again, even without spent skill points. On joining, selection waits for your saved race to arrive from the server. Orc attacks and draws bows/crossbows 10% slower. It starts with +2 melee/+1 ranged damage at full health; at 40/30/20% health this rises to +3/4/5 melee and +1.5/2/2.5 ranged, capped below 20%. These bonuses feed weapon attributes and RPG power, return to their starting level as health recovers, and do not replace equipment stats.

Official mod page

> Race selection sets permanent strengths, weaknesses, and passive traits before equipment begins to define the build. Consider exploration and survival effects as well as combat attributes, because the choice persists while class gear can change.

Classes and playstyles

RPG classes

- **Type:** Flexible RPG class
- **Core mechanic:** Four RPG Series modules supply Archer, Paladin, Priest, Rogue, Warrior, and Wizard loadouts through class books, weapons, and spells.
- **Player guidance:** Equip a class book and a compatible weapon to form a loadout.

Archers, Paladins & Priests, Rogues & Warriors, and Wizards supply six equipment-based playstyles. Rogues use combined dual-wield power for their scaling, with haste-affected skills, health-based stuns, empowered melee hits and hidden jump-sensitive traps. Tier III adds seven-second Vanish, Shadow Stealth that breaks on outgoing damage, targeted eight-block Mutilate casting in 0.25s and teleporting in front of an enemy before its dual-wield strike, healing 10% Dual Wield power, Crimson Strikes increasing that heal to 20% once per successful cast, Bloody Strikes and Prepared Counter. Wizard changes include target-centered Arcane Explosion, Charged Beam growing from 1.3x to 5x width (+0.10x per delivery), and Frost Shield damage immunity followed by a freeze burst. Arcane Barrage bolts deal 40% of emitter damage. Frost freezes ignore health and boss-status restrictions. Burst Blink blasts both departure and arrival. Wall of Flames allows four separate key presses within five seconds of the first; the fourth cast or window expiry starts its normal cooldown. Great Wall physically blocks living entities while active. Ancient Hydra continuously breathes fire at 24% of its own Fire power per delivery in a 40-degree cone. Ancient Hydra keeps facing close enemies while aiming its breath separately. Hydras choose the nearest visible enemy within 12 blocks; ordinary Hydra Fireballs deal 55% of their own power. Frost Elementals inherit 20% of caster Frost power. Legion summons three normal-sized elementals at 80% attributes; their six-block Super Novas freeze for 0.5 seconds. Colossus doubles attributes at 1.7 times normal size. Super Nova deals 180% of each elemental's own Frost power.

Mage follow-up: Evocation delivers ten pulses over 3s without increased damage taken. Blitz replaces Purge with two saved, serially recovering Blink charges, up to 7.5 blocks each, with smaller blasts and no Speed buff. Burst Blink can escape movement control; Arcane Ward can retreat four blocks after a qualifying hit when a safe landing exists. Fire/Frost weapon projectiles travel 30% faster with gentle near-aim steering; Arcane/Holy basics target up to 24 blocks. Mage traps last 5s. Fire Breath draws enemies toward its fan center, Eruption bursts beneath the attacker, and Flameward retaliation has a shared half-second interval. The single Ancient Hydra slowly advances toward its existing target and has a larger ground pulse. Frost skills, basics and owned Elementals apply finite damaging freezing exposure, extended after Frozen control. Frost Spikes becomes a targetable, dodgeable, enlarged spike; Glacial erupts instantly and Frost Fan adds one delayed blast. Winter's Chill empowers the next Frost basic, Near Zero freezes its triggering target for 5s, Frost Shield bursts for damage, Colossal Lance ignores 30% armor on its direct hit, and Blizzard throttles freezing separately per target. See the current mage mechanics.

Rogue pressure changes: Shock Powder has a 12s base cooldown, Smoke Screen grants 65 evasion points, and Explosive Powder adds Weakness I and Blindness I for 3s. Coated Blades prevents natural regeneration and Regeneration for 8s while leaving direct healing and absorption available. Vital Hit replaces Fracture: each stack removes 1 armor plus 1 per complete 13 Dual Wield power, and each proc deals physical damage equal to 5% target maximum HP before defenses. Shadowstep roots its selected enemy for 1s. Bear Trap lasts 25s; Serrated Bleed lasts 5s, and Extensive Coverage hits within 2 blocks. Bloody Strikes applies Bleed and prevents rolling for 5s. Sprinting and rolling preserve base Vanish, retaining its movement penalty and other break rules.

Class effects use restrained, distinct colors and native skill icons. Readied attacks glint; brief gain accents distinguish new stacks or shield HP from a timer refresh. Vanish clears existing marks; a faint violet silhouette and equipment fade between 0% and 10% visibility every four seconds. Later marks can reveal you again.

Class armor has small defensive differences by role. Full entry/advanced/netherite sets give Wizard and Priest 11/15/16 armor, Rogue and Archer 12/16/17, and Warrior 13/17/18. Toughness totals 0/0/4, with iron/diamond/netherite durability respectively. Armory legendary sets use the final tier. Class bonuses remain, while Paladin plate keeps its stronger defense. Netherite RPG armor and weapons, including bows, crossbows, staves, wands and shields, repair with Netherite Scrap. Legendary gear retains its own repair materials.

Path of the Paladin and its ordinary nodes grant +0.25 Healing Power each. Paladins cannot wield healing staves or wands in either hand; rejected weapons return to inventory with an oath warning. Plate Healing Power per piece is +1 Paladin, +1.25 Crusader, +1.5 Netherite Crusader, +1.5 Justicar and +1.75 Lightbringer. Priests cannot equip

these five plate sets; their node and a doctrine warning explain the restriction. Priest robes and other armor bonuses remain. Paladins choose Purge Heal, an enemy strike that heals on a successful hit, or Blessed Strikes, which heals during five preparation pulses and stores five holy waves for 15s. Actual melee swings release the waves, including held attacks, reaching airborne enemies up to 20 blocks away. Seal of Wrath hits two enemies per wave; Seal of Light strengthens pulse healing and heals nearby allies on the final pulse. Purge Heal heals for 20% Healing Power, rising to 25% with Improved and 35% with Divine Strength, and briefly stuns enemies; Blessed waves slow them for eight seconds. Vanguard periodically adds 20% damage and a 1s stun to a melee hit; a shield extends the stun to 2s. Guardian grants 2% armor and Healing Power, plus four 2% combat-hit stacks (3% with a shield) lasting 5s. Their proc intervals respond to haste. At tier II, Divine Protection blocks up to three hostile attacks without spending absorption and grants up to 30% damage reduction, or 40% with Bulwark. Melee investment improves attack blocks and knockback resistance; Healing Power strengthens protection and recovery. Its branches add knockback resistance (up to 80%) or recovery after the first hit. Divine Oath drops a hammer onto an ally, dealing 70% Melee Damage (100% with Judgement) and stunning nearby enemies, then grants capped bonus damage, armor and absorption for 7s. Melee investment strengthens its damage bonus; Healing Power strengthens absorption. Shield refreshes preserve spent HP. Sinful Retaliation readies a mark and a four-second true-damage retaliation after rolling; Break Restriction cleanses movement control and allows escape rolls only while ready. Paladin and Priest damaging skills deal 25% more damage to undead mobs. Paladin casts and cooldowns respond to haste; Battle Banner and Purgatory keep fixed 0.5s pulses. Gold ground circles show Divine Protection?s cast area, Banner?s moving aura, Divine Strength?s successful heal, Seal of Light?s final pulse and Divine Oath?s radiant hammer impact. Battle Banner is worn as a large back-mounted standard for 20s, building capped combat bonuses every 0.5s and healing up to 2 HP once per second; endgame investment reaches normal combat caps in about 10s, and overlapping general reduction uses the stronger protection; each ally can receive one 2s rescue per cast. Purgatory is a stationary channel lasting up to 30s: its fire, pull and ally support strengthen after 10s and 20s, granting allies Regeneration II then III, but later pulses deal 2 and 3 true damage, consuming absorption before health. Purgatory channels for 24s, strengthening at 8s and 16s. From 8s, control cannot interrupt the channel. Releasing during the final phase creates an earned finishing blast; completion or death adds a stun and shields allies. Final Resolute trades the full finish for a lifesaving early exit. Ardent Defender heals one endangered nearby party player for 30% of their maximum HP on an 80-second haste-affected base cooldown, without cancelling fatal hits; Reinforced increases armor and Healing Power as health falls. Priests choose Holy Light or Penance at tier I, then Circle of Healing or Ascension at tier II. Holy Light channels 25 deliveries over ten seconds with a smooth 12-24s cooldown. Penance fires ten bolts over five seconds: four-block blasts deal 15% Healing Power and build absorption for allies, with an 8-12s cooldown. Living-target hits also grant caster support outside the blast, once per bolt. Holy Staff Specialisation grants Holy Shock 5% more damage instead of shortening its cooldown. Circle heals, cleanses or grants Regeneration; Ascension lifts allies and repels enemies. Shield refreshes never refill consumed HP. Healing Focus builds up to 20% healing/absorption received; Cadence builds up to 15% haste. Both refresh for six seconds with a 0.25s base stack interval. Fade clears loaded pursuers without a distance limit and conceals equipment for one second; Divine Favor readies a retaliatory stun on a 12-second base cooldown. Party players and protected pets remain safe.

Priest tier III offers Lightwell or Barrier. Lightwell follows its caster for 16s (20s Improved), inheriting 5% Healing Power. Every 0.8s before haste, two motes target the injured allies with lowest raw HP within 16 blocks, or both target a sole injured ally, launching 0.3s apart. Useful cleansing or heart-stack targets remain eligible without injuries. Cleansing Light dispels per hit; Empowered Well adds up to two temporary maximum hearts, filled by ordinary healing. Barrier protects a ten-block radius from combat and damage over time for 10s (12s Improved). Sacred Refuge heals and cleanses for the same 10s (12s Improved); Deflective Shield retaliates against hostile shots. Base cooldowns are 80s and 60s. Pain Suppression reduces damage taken by up to 24% at low health; five Celestial Orbs retaliate for the caster and nearby allies. Priest casts and cooldowns scale with haste.

Warriors charge Throw Weapon or Throw Net in 0.3s; Throw Weapon travels at speed 1.8 and Throw Net at 1.4. Throw Weapon deals 40%-80% melee damage and inflicts Slowness IV for four seconds; Improved reaches 90%, Strong Throw hits two enemies with Slowness V, and Head Throw reaches 100% with five-second Slowness IV and a half-second stun. Its own-Weakness recast fix remains. Throw Net deals 7.5%-15% melee damage, roots eligible enemies and drags them toward you. Improved reaches 30 blocks; Bigger Net affects a five-block impact radius; Multiple Nets has a four-second cooldown and two-second root. Killing Spree stacks melee damage, heals 1 HP on qualifying hits at its shared interval, and heals 4% maximum health on kills. Endured Vitality grants one armor and one maximum heart per stack, up to ten stacks; only newly added hearts are healed.

Wild Charge grants two seconds of movement speed, knockback resistance and four armor, three seconds with Improved, on a 16-second base cooldown. Endurance grants six total armor and full knockback resistance; Concussion Blow stuns each nearby enemy once per cast for two seconds within 1.5 blocks. Charge permits full-

speed melee attack sprinting. Charge and Shout retain control purification and protection. Demoralizing Shout reduces offensive power by 20% and reveals enemies for six seconds in 12 blocks, or 16 with Improved, with a red ground footprint. Battle Shout grants 12% party offensive power. Challenging Shout deals 20% melee damage, draws aggro, briefly stuns, reveals the caster and prevents affected enemies from rolling. Warm Up heals 5% maximum HP on a roll with a one-second base cooldown. Momentum prepares five melee hits within eight seconds; each grants 3% attack and movement speed, up to 15%, for five seconds refreshed, on a twelve-second base cooldown. Warrior casts and cooldowns scale with haste; party allies and pets remain protected.

Multiplayer Purgatory walls enforce current party membership on the server: outsiders and former party members cannot walk through them. Better Combat attack validation now uses size-scaled weapon reach, including Titan's Mark and Enrage; shrinking reduces reach and removing effects restores it. Block reach stays unchanged. Both sides need matching updated JARs; see the multiplayer fix.

Selecting the Rogue/Assassin path permits full-speed sprinting during melee attacks. Adventurer ordinary melee nodes grant 2%; RPG Warrior ordinary damage nodes grant 5%. See the class rework.

The class follow-up adds slight near-miss assistance to Archer arrows, including eligible enemy players and excluding party members and pets. Supercharge adds 35% damage without slowing the draw; Concussive Shot has a six-second base cooldown. Opportunist opens a one-second critical window after its readied melee hit, starting cooldown on readiness consumption or expiry. Shadow Stealth ends on outgoing damage; Mutilate heals 10% Dual Wield power, or 20% with Crimson Strikes. Blazing Speed and Vanguard have five-second base cooldowns. Purgatory pulses show Meteor's burning-ground flames within six blocks; its finish uses Meteor's ground-impact presentation. Loaded RPG crossbows use their natural carrying pose, and Paper Doll shares the third-person animation pass.

Berserker channels five pulses while stationary, building attack speed, basic-attack damage and knockback resistance while increasing damage taken. Every pulse fully heals and grants rising Speed I-V for two seconds. Its fourteen-second buff lasts seventeen with Improved; expiry fully heals. Fatal rescue ends the buff, fully heals, puts both early skill tiers on cooldown and causes Nausea and stun. Melee attacks can sprint without attack slowdown. Brutality grants six critical-chance and critical-damage points per pulse, up to thirty each. Lethality heals 1 HP plus 1 per complete 10 Melee Power at a shared 0.2-second haste-affected interval, without self-damage. Last Stand grants 20% maximum health and 2% physical/magic damage resistance per pulse, healing newly added HP and another 20% current maximum HP on every pulse; it retains knockback immunity for fifteen seconds, twenty with Improved. Juggernaut raises total resistance to 4% per pulse and adds size. Sentinel stacks 2% melee damage per direct hit, up to 20%, and refreshes Regeneration II for five seconds. Both ultimates retain 60-100 second pulse-based cooldowns, stun/freeze interruption, death cleanup and their character/armor tints. Enrage grants up to 18% melee damage and 24% size. Tenacity has a thirty-second base cooldown and retains its fourteen-second shield and nearby stun. Both Warrior ultimates deliver five pulses every 0.8s over 4s before haste, earning 40/45/50/55/60s base cooldowns. Berserker fatal rescue stuns for 8s. Wild Charge with Endurance grants 8 total armor.

Activated shields reduce frontal damage by 80%, separately from armor and Resistance: 10 damage with 50% Resistance and a shield becomes 1. Axes cannot disable blocking, and sonic booms and piercing arrows cannot bypass this reduction. Rear hits and source-less environmental damage receive no shield reduction. Normal activation delay and durability remain.

Official mod page

> The RPG Series modules define classes through equipment rather than a permanent selection screen. Weapons, class books, spells, and matching armor work together, so compare a whole loadout before judging one item. The full starting sequence appears in Part I.

Skill trees and character progression

Skill Tree (RPG Series)

- **Type:** Character progression
- **Core mechanic:** Specializes class and weapon abilities by spending earned skill points.
- **Player guidance:** Open the skill screen with T and inspect class and weapon prerequisites.

Hover a spellbook or weapon and hold `Left Ctrl` to expand its spell details. Hold `Left Shift` for Penchant enchantment progress; hold both to show both sections. The RPG trees specialize the weapon and class book currently supporting the build. Plan a route through prerequisite nodes before spending points. This pack gives ordinary Arcane, Fire and Frost power nodes +3%, Priest Healing Power nodes +3%, and Assassin/Rogue Attack Speed nodes +2%. Warrior melee nodes grant +4%; ranged nodes and separate conditional weapon damage rewards remain +2%. Warrior root/ordinary damage nodes give 4%; Archer damage nodes remain 2%. Rogue root/ordinary attack-speed nodes give 2%. RPG Archer damage nodes receive no extra draw speed. Paladin class nodes grant +0.25 Healing Power. Class and weapon skill XP gains are 1.35 times their original rate. Mage active, weapon and summon damage now uses rounded 80% coefficients; separate school passives and healing remain. Echoing Blast stores two casts and recovers one at a time per haste-adjusted 12s, with no hit resets. Missiles has a fixed 12s base cooldown; both first-tier Arcane skills target within 40 blocks. Purge Heal reaches 30 blocks, Blessed Strikes channels five pulses in 1.5s, Divine Oath casts in 0.25s and both Warrior throws fully charge in 0.3s. Purgatory has a 12s base cooldown. Its first pulse pulls enemies strongly inward; continuous pull strengthens at 8s and 16s during the 24s channel. An orange wall contains enemies at the 12-block outer radius, or 14 with Improved, until channeling ends. The wall extends five blocks below and five above the caster, has no floor or roof, and lets allies and projectiles pass. Vanish prevents hostile skill selection and maintained homing locks, while untargeted damage still works. Flame Slash gently seeks visible nearby enemies. Native melee reach now follows the same size scaling as Better Combat. Frenzy arrows bypass ordinary hit i-frames while retaining defenses. Slight Archer arrow assistance adjusts modestly for faster projectiles, retaining narrow aim and ally protection. Wizard passive cooldowns scale with haste. Presence of Mind readies the next Arcane spell to apply +20% Arcane vulnerability for six seconds; Arctic Reflex makes the next Frost spell deal 1.2 times damage. Both readiness buffs last five seconds. Arcane, Flame and Frost Wards grant one absorption heart per six matching school power, last six seconds and have 12s base cooldowns. Enemy melee, projectile and spell hits activate them after damage; casting and environmental damage do not. Refreshes preserve spent absorption; overlapping Wards do not add their shields. Scorching Flames lasts two seconds. Winter's Chill lasts two seconds and adds eight percentage points of Frost critical-damage vulnerability per stack, up to five stacks. Cold Snap excludes Blizzard and Frost Elemental. Stun can affect living bosses while party allies and pets remain protected. Effect tooltips display received custom values and native stack-aware percentages, including debuffs. Stun, Root and Frozen have distinct official icons and plain control descriptions.

Official mod page

Pufferfish's Skills

- **Type:** Character progression
- **Core mechanic:** Provides the skill-tree interface and configurable progression framework.
- **Player guidance:** Use T to view the installed skill trees.

This mod supplies the common skill screen and progression framework. The other skill modules contribute the actual categories and nodes.

Official mod page

Adventurer Skills

- **Type:** Character progression
- **Core mechanic:** Adds Offensive, Defensive, Utilities and Companion paths.
- **Player guidance:** Choose one path within each combat, Companion or Utilities branch.

Offensive, Defensive and Companion alternatives lock at their first path nodes. You can develop different branches together. Utilities offers mutually exclusive Fitness, Adaptability and Ingenuity paths, each with seven ordinary nodes and a mastery requiring all seven. Completion nodes grant stats without item gifts. Adventurer skill XP gains are 1.35 times their original rate.

Offensive offers melee, ranged and **Magistrate** casting. Ordinary physical damage nodes grant +2% melee or +2% ranged damage and attack speed +2%. Caster nodes grant +3% Magic Damage (Arcane, Fire, Frost and Healing Power), +3% spell haste or +2.5 critical points. Magistrate ends with +10% Magic Damage including Healing Power, +5% spell haste and +15% magic resistance. Martial Prowess grants +6% melee damage/+5% attack speed/+10% armor penetration; Hunter grants +6% ranged damage/+5% draw speed, plus +25% bow/crossbow projectile speed, with armor penetration removed. Its former ordinary penetration node gives +3% movement speed; Martial ordinary nodes give damage or attack speed. Separate ordinary draw-speed nodes grant +5% for bows and crossbows; Hunter no longer grants Luck or Jump Strength. The earlier ordinary projectile-speed node grants +25% for bows and crossbows. Bow icons mark ranged damage; Crossbows mark draw speed.

Defense has three exclusive eight-point paths, each with seven ordinary nodes and one normal-sized specialty. Both final branches must connect to and unlock the specialty. Full Aegis grants +4 HP, +2 armor, 4% general Resistance and 4% healing received; surviving a direct enemy hit grants another 15% damage reduction for 3s, once per 20s. Full Colossus grants +6 HP, +2 armor, 2% general Resistance and 8% healing received; a direct hit below 40% health starts recovery of 10% sampled maximum HP over 5s before healing bonuses, once per 30s. Full Bulwark grants +2 HP, +4 armor, 8% general Resistance and 20 knockback-resistance points. General Resistance covers physical and magic damage. Defense healing rewards do not increase outgoing Healing Power. Existing Defense allocations receive a one-time scoped refund; other choices, points and earned XP remain.

Companion improves owned pets. Apple, Rabbit Foot, Leather Chestplate and Iron Horse Armor icons mark pet health, speed, resistance and knockback resistance respectively; the blue Pack Leader specialty uses steak. **Pack Leader** favors damage, speed and attack knockback; its final node grants +20% pet damage, +15% pet speed and +5% pet resistance. **Guardian Stead**, shown with Diamond Horse Armor, favors survival, ending with +10 pet hearts, +10% pet resistance and +30% knockback resistance. Ordinary pet resistance nodes grant 3% damage reduction each; combined Companion resistance is capped at 25% and multiplies with wolf armor protection. Added hearts need healing to fill.

Utilities starts with +4% Stamina. Fitness reaches +20% Stamina, +14% food/saturation and +24% underwater breathing; Emergency Rations fully restores hunger and saturation at three drumsticks or less, once per three minutes. Adaptability grants +10% jump, +4 safe fall blocks, +24% ladder/vine climb and sneak speed, and 25% slower environmental freezing; Sure Footing halves a damaging landing and protects against powder snow/freezing for 5s, once per 20s. Ingenuity grants +16% collected-orb XP, a 16% chance to preserve tool-use durability, +1 Luck and 35% longer beneficial food/drink effects. Its three cost nodes each reduce anvil and enchanting XP payment by 11%, totaling 33%; enchanting level requirements and lapis stay unchanged, with the discounted XP-point payment shown on hover. Utilities masteries use compact melon, diamond-boots and writable-book icons, with five chain nodes and two required final branches. Existing Utility benefits and cooldowns remain. No general movement-speed or mining-speed rewards are added.

Official mod page

The RPG Series trees specialize your current class and weapon, while Adventurer Skills supplies general combat, utility and pet progression. Both use Pufferfish's skill interface; press T to compare paths and prerequisites. The Orb of Oblivion refunds spent points in the RPG and Adventurer categories while preserving earned category experience. It also resets your Iourus race and opens race selection, including when no skill points have been spent. Craft it with four Totems of Undying in a cross, four Enchanted Golden Apples at the corners and a Netherite Ingot in the center. Successful Survival use requires and spends 30 experience levels; failed/no-op use costs nothing. Picking up a Netherite Ingot unlocks the recipe-book entry; the standard recipe is available to recipe viewers.

Abilities, spells, runes, and resources

Spell Engine

- **Type:** Spellcasting support
- **Core mechanic:** Connects class books and compatible weapons to the ability bar, targeting, costs, and cooldowns.
- **Player guidance:** Check the ability bar for a spell's target, cost, and cooldown.

Class damage hits non-party players and passive mobs; healing targets self and party allies. Party players and owned pets are protected. Roots slows movement/jumping by 60% within six blocks for six seconds: 12-second cooldown, or ten Improved. Nettle guarantees Poison; Nature's Grasp immobilizes for one second per pulse. Charged Shot splashes five blocks without falloff. Concussive guarantees a one-second stun on an eight-second cooldown. Rhythm grants 3% ranged attack speed per stack, capped at 15%, refreshed for four seconds. Mark grants 7% incoming damage per stack, capped at 21% or 28% upgraded. Power Shot prepares arrows for eight seconds (ten Improved); Mark lasts six seconds, refreshed; cooldown is 12 seconds. Barrage fires three accurate 60% arrows; Extensive adds one. Wolves have 20 HP plus 40% ranged damage (50% Improved), attack 3 plus 15%, and no innate knockback resistance; pet bonuses apply. Rain follows its target: 40 arrows at 60% ranged damage across six blocks; Torrential fires faster, while Endless fires 60 arrows every 0.35 seconds. Magic Arrows fires four wall-passing seekers lasting ten seconds: 80% ranged damage at full charge, 90% Improved or 100% with Magic Punch. Conjured launches a wide upward fan, begins medium homing after 0.5 seconds and reveals enemies for ten seconds on hit. Search radius is 32 blocks. Rain cooldown is 30 seconds; Magic Arrows remains 25 seconds. Archer casts/cooldowns scale with haste; debuffs affect living bosses.

Official mod page

Runes

- **Type:** Spellcasting support
- **Core mechanic:** Adds craftable ammunition consumed by applicable class spells.
- **Player guidance:** Carry the rune type required by the equipped spells.

Runes are ammunition for applicable class abilities. Craft them before a long expedition so the spell bar stays useful.

Official mod page

Spellcasting depends on the complete equipped loadout, available runes, and each ability's targeting and cooldown rules. Equip a compatible weapon and class book, then read the on-screen ability bar before combat; it reports why an attempted cast cannot fire.

Combat controls and dodge rolling

Better Combat

- **Type:** Combat
- **Core mechanic:** Changes melee timing through animated attacks, combos, dual wielding, and weapon reach.
- **Player guidance:** Practice the timing and reach of the equipped weapon.

Attack sequences and dual wielding change the rhythm of a fight. Judge a weapon across a full combo rather than a single hit.

Official mod page

Combat Roll

Multi Roll grants at most two additional rolls: +1 at level I, +2 at II and III. Higher saved levels also stop at +2; other roll sources remain separate.

- **Type:** Combat
- **Core mechanic:** Adds a dodge roll with attributes and enchantments that can support evasive builds.
- **Player guidance:** Press E to dodge away from a telegraphed hit.

Roll timing gives melee builds room to reposition. Attributes and enchantments can change how the roll performs.

Official mod page

Target Dummy

- **Type:** Combat
- **Core mechanic:** Provides a safe target for comparing full attacks and damage sequences.
- **Player guidance:** Attack a dummy with the complete loadout equipped.

A repeatable target makes weapon and spell comparisons easier. Include cooldowns, passive effects, and full combos in the comparison.

Official mod page

Floating Damage Indicators

- **Type:** Combat
- **Core mechanic:** Shows damage values during combat so loadouts are easier to compare.
- **Player guidance:** Compare several hits under the same conditions.

Color-coded values show damage during combat. One large number may hide slower attack timing or passive triggers.

Official mod page

Combat combines attack timing, weapon reach, dodging, and visible damage feedback. Practice with a target dummy before entering a major encounter, keeping accessories, buffs, and ammunition consistent when comparing equipment.

Weapons, armor, jewelry, and relics

Curios

- **Type:** Equipment
- **Core mechanic:** Provides the shared accessory panel and functional or cosmetic equipment slots.
- **Player guidance:** Open its panel with the inventory button; the direct key is unbound.

The ribbon switches between functional slots and purple vanity slots. Cosmetic items change appearance without granting their normal gameplay effects.

Official mod page

SimpleHats Lite

- **Type:** Equipment
- **Core mechanic:** Adds hats that can occupy functional or vanity Head, Face, and Hat slots.
- **Player guidance:** Use functional or purple vanity Head, Face, and Hat slots.

Vanity placement supports layered looks without replacing useful headgear. A functional slot still follows the hat's own gameplay effects.

Official mod page

Arsenal

- **Type:** Equipment
- **Core mechanic:** Places legendary RPG weapons in valuable exploration and combat rewards.
- **Player guidance:** Look for its weapons in valuable boss and dungeon rewards.

These rare weapons carry built-in passive spells. Compare their effect and combat rhythm with the current class loadout.

Official mod page

Armory

- **Type:** Equipment
- **Core mechanic:** Adds class-oriented armor sets with distinct effects and set bonuses.
- **Player guidance:** Inspect class set bonuses before replacing an armor piece.

Legendary full sets grant 16 armor for robes, 17 for Rogue/Archer and 18 for Warrior, each with 4 toughness and netherite durability. Their class and set bonuses remain. Justicar grants +1.5 flat Healing Power per piece, totaling +8 with its separate +2 set bonus. Lightbringer grants +1.75 per piece (+7 from four pieces). Other stats and set bonuses remain. Upgrade materials come from later exploration and combat.

Official mod page

Jewelry

- **Type:** Equipment
- **Core mechanic:** Adds rings and necklaces with combat attributes for Curios slots.
- **Player guidance:** Equip matching rings and necklaces in Curios slots.

Gem and material tiers affect the available bonuses. Use jewelry to strengthen the attributes the chosen class actually uses.

Official mod page

Relics

- **Type:** Equipment
- **Core mechanic:** Adds trinkets whose passive or active effects can reshape a build.
- **Player guidance:** Read each active or passive effect before equipping it.

A relic can alter how a build plays rather than simply raising a stat. Valuable relics are often exploration rewards.

Official mod page

Artifacts

- **Type:** Equipment
- **Core mechanic:** Adds powerful accessories found through exploration, chests, and archaeology.
- **Player guidance:** Explore structures and archaeology sites for accessories.

Artifacts complement RPG equipment: Power Glove adds 5% melee damage capped at +2; Crystal Heart adds 10% maximum HP capped at +8. These bonuses exclude their own contributions and do not heal on equip. Feral Claws gives +10% base attack speed and Running Shoes +15% sprint speed. Vampiric Glove heals 5% of actual melee health damage, up to 1 heart once per second; overkill, absorption and retaliation do not increase it. Retaliation has fixed intervals and cannot chain. Charm of Shrinking retains 75% size, 1.2x movement speed and Weakness II. Steadfast Spikes grants 30% knockback resistance in Feet, separate from Nameless Shoes. Read each item's slot, cap and drawbacks.

Official mod page

Nameless Trinkets

- **Type:** Equipment
- **Core mechanic:** Adds craftable and lootable trinkets with varied abilities.
- **Player guidance:** Compare the slot and ability shown on each trinket.

Only one copy of each Nameless trinket can be active. The pack retains 41 trinkets and disables 13 relics, including the crowns, flight wings, Dying Star and larger magnets. Combat procs have modest wearer-power scaling, hard caps and fixed intervals; Missing Page no longer scales with a boss's health. Moon Stone has 3/8 of its former gravity reduction and retains fall protection. Titan's Mark gives +25% size, +5% attack and +15% maximum HP capped at +10, with Resistance I and Slowness I. Ghast Eye adds 7.5% maximum HP capped at +6. These health items share a baseline excluding each other and Health Boost; added capacity is not healed. Tick now drains eligible enemies within eight blocks once per second with capped wearer-power damage and a health or hunger cost, protecting party pets. Fractured Nullstone is retired; saved copies are inert. Vampire Blood gives +10% attack and movement speed, capped kill healing, and its persistent two-Minecraft-day removal lock. Shrinking Veil retains 75% size and Weakness II. Existing effects may linger after removal. The Lunar Crest server crash remains repaired.

Official mod page

Tool Belt

- **Type:** Equipment
- **Core mechanic:** Stores eligible tools in a wearable belt with pouch upgrades and a radial selector.
- **Player guidance:** Wear the belt and use its radial selector for stored tools.

Pouch upgrades expand its capacity. Keep the most frequently swapped tools together for travel and building. The dedicated belt slot opens with `Shift + Q` and remains equipped after Better Revive death and respawn.

Official mod page

Dedicated Elytra Slot

- **Type:** Equipment
- **Core mechanic:** Lets an Elytra occupy its own slot while a chestplate stays equipped.
- **Player guidance:** Equip an Elytra without removing the chestplate.

The separate slot preserves chest armor while travelling. Check the Elytra's own durability before a long flight.

Official mod page

CrossArms

- **Type:** Crossbow enchantments and cosmetics
- **Core mechanic:** Adds automatic fire, high-velocity shots and projectile-control options.
- **Player guidance:** Choose a role before enchanting; several powerful effects exclude each other. Frenzy heat is now a tradeoff between damage and magic self-damage.

CrossArms 1.4 offers Acceleration, Frenzy, Ricochet and Zero Drop. **Capacity is removed; Bombard, Deflector and Recycling are removed.** Held legacy Might/Frenzy combinations lose Frenzy. Each Frenzy shot restarts its recoil animation. Frenzy auto-feeds normal arrows; Infinity preserves them but still requires one arrow and makes fired arrows uncollectible. Frenzy spreads more as heat rises: 115/125/140/160/185/220% of normal crossbow spread at zero through five bars. Every shot applies Slowness II (-30% movement) for one second, refreshed while firing; first shots and taps use the same heat multiplier. It starts at 20% shot damage through the first two bars, reaches 30% at the third/red heat bar, 40% at the fourth/dark red bar and 50% at the fifth/black bar. Heat deals magic damage every 20 ticks: 1 HP at the third bar, 2 HP at the fourth and 4 HP at the fifth. Fire Resistance does not stop it. Heat persists when swapping weapons and cools naturally.

The 26th arrow fires, then the crossbow displays **Empty - Reload** for three seconds and stops auto-feeding. The notice disappearing does not reload it. Hold Use to complete a normal crossbow crank; an interrupted crank or waiting will not clear exhaustion. Rapid clicks between automatic shots no longer start a premature crank. An exhausted crossbow that already holds an arrow can complete its crank without consuming another arrow. Three seconds without firing resets a partial counter only. Frenzy weapons share the player's counter across both hands, so swapping cannot skip the crank. Infinity prevents ammunition consumption but does not skip cranking.

Overheating no longer forces durability down. Ordinary firing wear remains, and auto-feeding stops at one remaining durability. The local firing repair supports vanilla and modded crossbows in either hand. Acceleration increases velocity; Zero Drop removes gravity but disables both vanilla arrow and RPG critical hits; Ricochet adds bounces.

Multishot reaches level III with up to seven projectiles, wider spread and a close-range neighboring-arrow damage effect. Multishot, Might, Acceleration and Frenzy are mutually exclusive. Piercing and Zero Drop have no pairwise enchantment conflicts. Gravity conflicts with Frenzy but permits Multishot, Might and Acceleration. Apply skins at a smithing table; revert with a stick. No new keybind is required.

Official project page

Expanded Crossbow Enchantings

- **Type:** Enchantment compatibility
- **Core mechanic:** Adds crossbows to Looting's supported items and permits Multishot with Piercing.
- **Player guidance:** Use an anvil to combine supported books; retain the other CrossArms restrictions.

The local 1.11 integration preserves CrossArms's Multishot III effects and Piercing trails instead of overwriting them with vanilla-style definitions. Looting still supports melee weapons. Its older entity predicate is repaired for 26.2 so the server can load the enchantment registry.

Official project page

All Arrows Infinity Fix

- **Type:** Equipment utility
- **Core mechanic:** Extends the Infinity enchantment to every arrow type.
- **Player guidance:** Pair an Infinity bow with the arrow type suited to your target.

One carried arrow can supply repeated shots when Infinity applies. Check special arrow effects and bow compatibility in the installed game.

Official mod page

Fletching Recipe

- **Type:** Equipment
- **Core mechanic:** Gives the fletching table recipes for ordinary and explosive arrows.
- **Player guidance:** Use the fletching table for its added arrow recipes.

The table now has a practical role in ammunition preparation. Check JEI for ordinary and explosive options.

Official mod page

Shield Upgrades

- **Type:** Equipment
- **Core mechanic:** Adds specialized shields with different defensive strengths.
- **Player guidance:** Choose a shield for the expected encounter.

Specialized shields offer different defensive strengths. A new shield may be a sidegrade rather than a direct upgrade.

Official mod page

Armor Quick Swap

- **Type:** Equipment
- **Core mechanic:** Exchanges armor pieces or complete worn sets through inventory and armor stands.
- **Player guidance:** Use the inventory or armor stand to change gear quickly.

Keep separate combat, travel, and utility sets when useful. The swap replaces the manual movement of several armor pieces.

Official mod page

> Equipment is a network of class gear, accessory slots, weapons, ammunition, and utility items. Choose pieces that support the same role, then compare set bonuses, attack rhythm, and passive effects instead of relying on a single armor or damage value. Curios also offers a separate vanity layer for appearance; Part I explains that layer in detail.

Enchanting and equipment improvement

Penchant

- **Type:** Equipment improvement
- **Core mechanic:** Levels eligible enchantments through use and can change enchanting through world modules.
- **Player guidance:** Hold Left Shift over enchanted gear to view progress.

Protection, Projectile Protection, Fire Protection, Blast Protection and Magic Protection each grant 1% reduction per level per armor piece: 4% at IV, or 16% across four pieces. General and matching specialized protection add within the enchantment layer. The existing rule allowing all five together is retained.

Eligible enchantments grow as their item is used, with progression targets reduced to 40% in this pack. Its optional world modules also alter table, durability, loot, and anvil behavior as detailed in Part I.

Official mod page

Easy Anvils

- **Type:** Equipment improvement
- **Core mechanic:** Makes repair, combining, and renaming less punitive.
- **Player guidance:** Use anvils for repair, combining, and renaming.

The anvil workflow is more forgiving than vanilla. Penchant's world settings can still affect enchanted books.

Official mod page

Universal Enchants

- **Type:** Equipment improvement
- **Core mechanic:** Broadens which equipment can accept compatible enchantments.
- **Player guidance:** Check the item tooltip for new compatible enchantments.

This mod broadens where existing enchantments may be applied. Server settings determine the final combinations.

Official mod page

DarkSmithing

- **Type:** Equipment improvement
- **Core mechanic:** Adds custom ways to craft smithing templates.
- **Player guidance:** Look up smithing-template recipes in JEI.

Custom template crafting creates another route to equipment decoration. The installed recipes determine material costs.

Official mod page

Elytra Trims

- **Type:** Equipment improvement
- **Core mechanic:** Extends trim and dye decoration to Elytra.
- **Player guidance:** Decorate Elytra with supported trims and dyes.

This extends visual customization to flight gear. Decoration does not by itself change the Elytra's travel mechanics.

Official mod page

Naturally Trimmed

- **Type:** Equipment improvement
- **Core mechanic:** Places trims on some generated mob, loot, and trade equipment.
- **Player guidance:** Look for decorated equipment in generated loot and trades. The pack safely handles short trade pools.

Some found gear arrives with a trim already applied. The trim primarily changes its appearance.

Official mod page

Armor Trim Item Fix

- **Type:** Equipment improvement
- **Core mechanic:** Shows applied trim patterns on inventory icons.
- **Player guidance:** Inspect trimmed gear in the inventory.

Its item icon shows the applied pattern more clearly. This helps identify decorated equipment without equipping it.

Official mod page

Enchantments collection

- **Type:** Equipment improvement
- **Core mechanic:** Adds focused enchantment effects for movement, combat, armor, shields, and arrows.
- **Player guidance:** Read each tooltip for its trigger, level, and eligible slot.

Feather Falling reduces fall damage by 6% per level, reaching 24% at IV. The Toughness enchantment and its books are removed; armor?s own toughness remains. Other removed enchantments: Protection Grace, Antidote, Traveler, Soulbound, Air Jump, Tense, Withering, Deflector, Bombard, Recycling, Ghasted, Penetrating Strike, Spiteful and Decay. Vanilla Sweeping Edge remains hidden. Flame/Frost/Spectral are mutually exclusive; Tri-Shot excludes Power. Thorns excludes Fire Protection and Blast Protection on one piece. Fangs is removed; saved equipment retains its other enchantments. Boots cannot combine Frost Walker with Soul Speed. Double Hit is excluded. Sharpness excludes Smite and the Arthropod/Aerial/Illager Banes; those four can combine with each other and Ensnaring. Ensnaring excludes Sharpness. Discharge excludes Fire Aspect/Frost Aspect. Life Steal is removed.

Official mod page

Penchant makes using enchanted gear a progression loop, while the supporting mods expand compatibility, repair, smithing, trim visuals, and specialized effects. Read tooltips for precise triggers and equipment rules, and check the current world's Penchant data packs before relying on its optional changes.

Death, revival, graves, and respawning

PlayerRevive

- **Type:** Survival and recovery
- **Core mechanic:** Gives teammates a short downed window in which they can intervene.
- **Player guidance:** Watch for a teammate's short downed window.

A downed player can still be rescued before normal death handling completes. Knockdown restores the player to their current maximum health, including gear bonuses; health granted after rescue follows the revive settings. With Better Revive X PlayerRevive installed, this is the first rescue window; bleeding out or giving up passes the player to Better Revive's grave and longer revival window.

Official mod page

Better Revive

- **Type:** Survival and recovery
- **Core mechanic:** Stores inventory, equipped Curios, and experience in a protected grave while retaining the hotbar, armor, and offhand.
- **Player guidance:** Accept a teammate's revive request, or respawn and use the Grave Compass to return to your grave.

Teammates can throw a Revive Potion near the grave or start the Life Pulse minigame; the downed player must accept. On respawn, your hotbar, armor, offhand, and Tool Belt slot stay equipped, including after disconnecting while downed and returning to the death screen. The Grave Compass takes the last hotbar slot and moves its previous item into inventory. Each death keeps a separate grave. The compass targets the newest active one, switches to the next newest after collection, and stays on the newest if you collect an older grave first. Curios and Sophisticated Backpacks go to the grave. Each grave defaults to 5 minutes, though a world's saved timer can differ. Better Revive X PlayerRevive prevents repeated bleed-out loops.

Official mod page · PlayerRevive integration · Curios integration

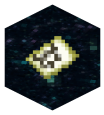

Better Respawn

- **Type:** Survival and recovery
- **Core mechanic:** Usually returns players near a death site, subject to spawn and dimension rules.
- **Player guidance:** Expect a nearby return only when its spawn rules allow it.

A death site may become the respawn area. Spawn points, dimensions, and End travel can change the result.

Official mod page

Spread Spawnpoints

- **Type:** Multiplayer utility
- **Core mechanic:** Assigns new players initial spawnpoints using the server's chosen pattern.
- **Player guidance:** Your first arrival may be away from other players; coordinate a meeting point.

New worlds default to Spring placement: players start at separated locations in a connected spread around world spawn. Operators can still choose vanilla, random, grid or spring. Existing worlds keep their saved mode; use `/spawnpoints generator set spreadspawnpoints:spring false` to switch without clearing assignments, then restart to register existing locations with Spring. Initial arrival and later default respawns were verified in isolation; beds, revive mods and Better Respawn have separate rules.

Official mod page

Charm of Undying: Reborn

- **Type:** Survival and recovery
- **Core mechanic:** Uses a Totem of Undying equipped in the Curios Charm slot.
- **Player guidance:** Equip a Totem in the Curios Charm slot before danger.

The charm consumes the totem when it saves the player. Restock it after activation.

Official mod page

Harder Natural Healing

- **Type:** Survival and recovery
- **Core mechanic:** Changes the speed and hunger cost of natural recovery.
- **Player guidance:** Carry enough food and healing for the journey.

Natural recovery no longer follows the usual vanilla pace. Server settings control its exact speed and hunger cost.

Official mod page

> Recovery happens in stages: PlayerRevive gives teammates the first rescue window; if that ends, Better Revive protects most inventory and experience in a grave and allows another revival attempt. Hotbar items, armor, and offhand equipment return to you, while equipped Curios go into the grave. Tool Belt's separate slot remains equipped, and Sophisticated Backpacks always remain in the grave. Better Respawn can change the return point after final death. Prepare totems, food, and group support before dangerous trips, then follow the Grave Compass if you respawn with a grave still active.

Parties and multiplayer cooperation

PVP Flagging

- **Type:** Multiplayer combat
- **Core mechanic:** Players and their four RPG summons retain 35% damage against players and 80% against mobs.
- **Player guidance:** Join a Better Party with Friendly Fire off to protect party members.

Everyone can fight by default. Player attacks, Spirit Wolves, Arcane Barrage emitters, Hydras and Frost Elementals retain 35% damage against players and 80% against other entities. Ordinary mob attacks and mob-versus-mob combat remain at 100%. Better Party controls party friendly fire; vanilla combat permissions still apply. Attributes, healing and skill coefficients are unchanged. Each hit is scaled once after defenses. Operators can use `/pvpdamage <percent>` and `/pvedamage <percent>` to change retained damage from 0 to 100, including these summons; omit the value to check it. Settings save per world and apply immediately. A confirmed PvP hit flags both players for 40 seconds; further hits refresh it silently. During combat, Sophisticated Building tools and OneKeyMiner chains are disabled. Ordinary building allows 20 placements and 30 breaks in separate 30-second windows, each starting with its first attempt. Limits end when the combat flag expires. Three bottom-left icons show combat, breaking and placement timers; 0 means that block window is ready. Private warnings explain blocked actions. Reconnecting does not reset the limits.

Official mod page

Better Party

- **Type:** Multiplayer
- **Core mechanic:** Adds group roles, nearby XP sharing, private chat, friendly-fire rules, and a live HUD.
- **Player guidance:** Open the party menu from its inventory button or use /p for private chat.

Groups can share nearby experience and show a live roster. Turn party Friendly Fire off to protect members from melee, arrows and standard spells. Allowed PvP hits retain 35% damage after defenses, including attacks from the four player-owned RPG summons. Party and owned-pet protections also check the summon owner. Roles, friendly-fire rules, and visibility depend on the party's settings and server policy.

Official mod page

Part III — Adventure and Challenge

Exploration is a chain of decisions rather than a list of places to visit. A map shows terrain already explored, compasses seek chosen targets, and waypoints or activated travel points protect the return trip. Mark home, check the current dimension, and carry the food, runes, arrows, and recovery items that the chosen build uses. A discovered structure or rare biome can begin an encounter with its own rules, so scout before activating unfamiliar blocks or summoning items.

World generation, seasons, creatures, bosses, and multiplayer events can overlap in the same journey. Newly generated chunks reveal new terrain after a pack update, while familiar explored areas retain their older layout. Read the local cues, record a retreat route, and prepare for the destination rather than carrying every possible tool. The categories below show which mod supplies each kind of travel, threat, or reward.

Travel, maps, compasses, and teleportation

Waystones

- **Type:** Travel and navigation
- **Core mechanic:** Adds discoverable and craftable travel points that must be activated before they can be selected as destinations.
- **Player guidance:** Activate a new point before treating it as a return destination.

A discovered point only becomes useful after activation. Keep a known point near home before crossing dimensions or travelling far.

Official mod page

Asgardian_Mod (Bifrost Teleport)

- **Type:** Asgardian weapons and group travel
- **Core mechanic:** Asgardian weapons add a Bifrost destination skill to the normal RPG skill bar.
- **Player guidance:** Choose Asgardian in Iourus Races, craft and hold a Bifrost weapon, then use the Bifrost icon at the end of your skill bar.

Getting started. Hofund matches a Diamond Claymore: two-handed, with Flurry. Mjolnir matches the Netherite Mace and grants Smash. Stormbreaker matches the Netherite Great Hammer, with 0.8 attack speed, two-handed combat and Ground Slam. Your build's bonuses still apply. Mjolnir and Stormbreaker are unbreakable and bind to their crafter. An old unbound weapon needs `/asgard claim` while held or targeted on the ground. Taking another owner's weapon is blocked. JEI shows their crafting recipes. In Creative, find the marker under Functional Blocks and the weapons under Combat. All four also appear in creative search and JEI.

Bifrost skill. Hold any of the three weapons in your main hand. Bifrost appears after your existing weapon, class and active accessory skills. Use its displayed skill key to open destinations instantly, with no spell cooldown. Its number follows your loadout: if the weapon skill uses right-click, class skills use 1-3 and a trinket uses 4, Bifrost uses 5. Swapping to an ordinary weapon removes it. The supplied rainbow portal icon identifies the skill. Existing user skill-key choices remain available.

Current controls. Right-click remains available for the normal RPG weapon skill. It no longer opens Bifrost in air or starts a custom weapon channel. The old Asgardian Ability selector, custom attacks, throw controls and healing passives are disabled for now. Only Bifrost is enabled as an extra custom skill. Right-clicking a marker still opens its destination interface.

Bound weapons and death. Ownership protection and protected death-site recovery remain. First downing retains the weapon but disables its use. On final death it waits at a saved, protected death-site position instead of entering the grave; return there and crouch against it to retrieve it. Only its owner can recover it. Restarting, changing race or respawning does not summon a waiting weapon. An administrator can recover a genuinely stranded weapon; ordinary gameplay cannot transfer ownership.

Group travel. Name markers and select a destination in the same dimension. The charge takes three seconds, with a five-second travel cooldown afterward. When the descending source beam first reaches the ground, it captures eligible entities intersecting its six-block footprint and 72-block column. Mixed-race passengers, pets and vehicles with riders can accompany the Asgardian initiator; entering later misses that trip. Items, projectiles, dead/downed players and other transit visuals are excluded. Groups need separate safe landing spaces near the target; a group with no safe landing stays at source. Race loss, downing or another invalid initiating action cancels charging. The prismatic beam and four phase sounds leave no world blocks behind.

Existing marker IDs and destinations remain valid. Matching updated Bifrost and Asgardian-enabled Iourus builds are required on client and server. Bifrost menu access and skill ordering have isolated client/server checks; overall equipment balance still needs playtesting.

Pack-distributed JAR

Explorer's Compass

- **Type:** Travel and navigation
- **Core mechanic:** Searches for vanilla and modded structures through an item interface.
- **Player guidance:** Select the structure to search for, then plan a route around obstacles.

The compass supplies direction and distance, not a safe path. Check the dimension before walking toward the target.

Official mod page

 Nature's Compass

- **Type:** Travel and navigation
- **Core mechanic:** Searches for vanilla and modded biomes and displays information about the selected result.
- **Player guidance:** Select a biome target and reset the search when plans change.

Biome searching narrows the destination but leaves the trip itself unexplored. Mark a return point before following the needle.

Official mod page

 Xaero's Map Multiplayer

- **Type:** Travel and navigation
- **Core mechanic:** Adds multiplayer-oriented features to Xaero's maps.
- **Player guidance:** Use its shared map features when travelling with a group.

Coordinate landmarks and waypoints with the party before separating. Each player should still keep a personal return route.

Official mod page

 Xaero's World Map

- **Type:** Travel and navigation
- **Core mechanic:** Builds a full-screen map from terrain the player has explored.
- **Player guidance:** Press M to inspect known terrain and mark a return route.

The map records explored ground and leaves new areas blank. Pan and zoom to compare landmarks, then use coordinates to confirm the route.

Official mod page

> Travel tools serve different jobs: maps preserve routes you have explored, compasses seek a selected destination, and teleport systems shorten a known return trip. Mark home before setting out, verify the current dimension, and remember that a direction or waypoint does not guarantee a safe path.

Integrated world and dimension expansions

 Alex's Caves

- **Type:** World expansion
- **Core mechanic:** Adds six rare underground cave biomes with distinct environments, hazards, creatures, materials, and progression.
- **Player guidance:** Find an Underground Cabin and follow its Cave Tablet toward a Codex.

A Codex explains a cave biome's resources and hazards; an extra Codex with paper can lead to a matching Cave Map. Prepare for that cave's particular risks.

Official mod page

Better Nether

- **Type:** World expansion
- **Core mechanic:** Expands Nether terrain, biomes, vegetation, structures, creatures, and exploration rewards.
- **Player guidance:** Mark the portal before exploring new Nether terrain.

The denser landscape changes navigation as well as the materials and encounters. Carry supplies for a return trip through unfamiliar structures.

Official mod page

Better End

- **Type:** World expansion
- **Core mechanic:** Adds End biomes, island terrain, caves, plants, mobs, materials, and structures.
- **Player guidance:** Explore newly generated End chunks and mark a return route between islands.

Distinct biomes and resources make outer-island travel more varied. Check the recipe interface for ways to use new End materials.

Official mod page

Biomes O' Plenty

- **Type:** World expansion
- **Core mechanic:** Adds more than 50 biomes plus matching plants and blocks.
- **Player guidance:** Search newly generated Overworld terrain for its plants and blocks.

Its biomes add materials as well as scenery. Explore beyond old chunks after a pack update to find new generation.

Official mod page

Terralith

- **Type:** World expansion
- **Core mechanic:** Rebuilds Overworld terrain around almost 100 realistic and light-fantasy biomes made from vanilla blocks.
- **Player guidance:** Travel into new chunks to see its terrain shapes.

It reshapes Overworld exploration with large natural and fantasy landscapes. Most of its terrain uses familiar vanilla blocks.

Official mod page

William Wythers' Overhauled Overworld

- **Type:** World expansion
- **Core mechanic:** Reinterprets vanilla biomes with larger, more realistic, and atmospheric terrain.
- **Player guidance:** Watch how familiar biomes change in scale and atmosphere.

The mod reinterprets existing terrain rather than adding a separate destination list. Use map landmarks to orient yourself in broader landscapes.

Official mod page

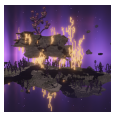

Dungeons Dimensions: Nether

- **Type:** World expansion
- **Core mechanic:** Brings Minecraft Dungeons-inspired detail and encounters to the Nether.
- **Player guidance:** Treat Nether structures as active encounters.

Its dungeon-inspired additions give the dimension more places to explore. Carry a portal route and combat supplies before entering unfamiliar sites.

Official mod page

Nullscape

- **Type:** World expansion
- **Core mechanic:** Reworks End terrain and island generation.
- **Player guidance:** Expect End islands and terrain to differ from vanilla routes.

Generation changes the ground between major End destinations. Keep bridging supplies and a safe return plan.

Official mod page

Clear End City

- **Type:** World expansion
- **Core mechanic:** Adds cinematic End structures, void gardens, crashed citadels, and new loot locations.
- **Player guidance:** Look for its structures during outer-End exploration.

The added sites make the End more than a short End City search. Keep unique finds until their uses are clear.

Official mod page

Serene Seasons

- **Type:** World expansion
- **Core mechanic:** Adds seasonal color, temperature, and environmental changes.
- **Player guidance:** Check the current season when crops or temperatures change.

A known biome can behave differently over the year. Adjust farming plans before assuming light or hydration is the only issue.

Official mod page

Abyssal Ocean

- **Type:** World expansion
- **Core mechanic:** Generates rare, extremely deep offshore ocean regions that become darker toward bedrock.
- **Player guidance:** Prepare for depth and darkness before entering its rare ocean regions.

These offshore areas can extend far below ordinary ocean terrain. Bring a reliable ascent and return route.

Official mod page

> Terrain, biome, structure, and dimension mods overlap to create the landscape of a journey. Existing chunks keep their earlier generation, so travel into new terrain to find newly added features. Prepare for each dimension's hazards and progression rather than assuming a familiar biome contains familiar enemies.

Fishing and collection systems

Starcatcher

- **Type:** Fishing and collection
- **Core mechanic:** Reworks fishing around more than 100 collectible fish, condition-based catches, a skill minigame, rod attachments, trophies, and tournaments.
- **Player guidance:** Open the guide with Ctrl + Space; use Space for a minigame hit.

Species depend on conditions such as biome, weather, time, and dimension. Check the catalogue before using a rare first catch.

Official mod page

> Starcatcher turns fishing into a location and conditions puzzle with gear, a minigame, and a growing catalogue. Read its guide and check weather, biome, time, and dimension before changing equipment or repeatedly casting in one spot.

Companions, pets, villagers, and settlements

Companions: Dogfolk

- **Type:** Companions and settlements
- **Core mechanic:** Adds dogfolk companions.
- **Player guidance:** Observe a companion's behavior before taking it into danger.

Dogfolk adds another kind of travelling ally. Keep its safety in mind when crossing difficult terrain or starting a boss encounter.

Official mod page

Wild Pets

- **Type:** Companions and settlements
- **Core mechanic:** Makes polar bears, pandas, and foxes tameable; tamed bears can also be ridden.
- **Player guidance:** Check each species' taming and riding behavior in play.

Tameable wildlife gives exploration a companion goal. Bring safe transport and supplies before moving a new pet far from its home biome.

Official mod page

Animal Pen

- **Type:** Companions and settlements
- **Core mechanic:** Stores groups of farm animals in a single block to simplify husbandry and reduce entity load.
- **Player guidance:** Use the pen for a compact group of farm animals.

One block can simplify husbandry and reduce loose entities around a base. Open its guidebook to review supported animals and interactions before changing an established farm.

Official mod page

Compact Villagers

- **Type:** Companions and settlements
- **Core mechanic:** Lets players carry villagers and trade through compact booths.
- **Player guidance:** Move villagers carefully and set up trade booths where needed.

Portable villagers can make trading more accessible. Protect valuable traders before experimenting with placement.

Official mod page

Name Tag Upgrade

- **Type:** Companions and settlements
- **Core mechanic:** Allows on-the-go renaming and adds convenience improvements to name-tag use.
- **Player guidance:** Carry the tool when renaming companions away from base.

On-the-go naming is useful during exploration and animal care. Confirm the target before applying a name.

Official mod page

Pet Status

- **Type:** Companions and settlements
- **Core mechanic:** Exposes useful health and status information for owned pets.
- **Player guidance:** Use Shift + R to check an owned pet before travelling.

Health and location information helps find a missing companion. An unloaded pet may show its last known position rather than live status.

Official mod page

Iron Wolf Armor

- **Type:** Companions and settlements
- **Core mechanic:** Adds protective equipment for wolves.
- **Player guidance:** Equip protection before bringing wolves into combat.

Wolf armor reduces damage instead of absorbing entire hits: Leather 10%, Copper/Gold 15%, armadillo/Chainmail 20%, Iron 25%, Diamond 35% and Netherite 45%. These percentages replace the item's normal armor/toughness contribution. Native wolf-armor bypasses remain. Companion resistance applies separately, so Netherite with capped pet skills lets 41.25% of otherwise unmitigated damage through. Watch the wolf's health and repair its armor.

Vanilla and Iron Wolf Armor accept Unbreaking, using Penchant's smaller armor-specific durability benefit. Armor worn by an owned wolf gains enchantment progress from durability wear. Unbreaking reduces wear, never incoming HP damage or eventual breakability; this compatibility does not enable Protection on wolf armor.

Official mod page

Pet Vault

- **Type:** Companions and settlements
- **Core mechanic:** Stores, summons, and manages owned pets and mounts through the Keeper's Locket radial menu.
- **Player guidance:** Equip the Keeper's Locket in a Nameless Trinkets **Trinket** slot or a Curios Necklace slot; press R for its menu.

Register an owned pet, then left-click its slice to store or summon it. Right-clicking a summoned pet unregisters it instead.

Official mod page

These mods add animals to tame, companions to manage, and more ways to protect or trade with settlements. Pet Vault handles storage and summoning, while Pet Status supplies a quick health and location check; villagers and other social creatures use their own interaction rules.

Bosses and major encounters

World Bosses

- **Type:** Late-game raid encounters
- **Core mechanic:** Eleven ritual and realm bosses with changing attack patterns, party scaling and personal reward caches. This pack replaces their equipment progression with materials and supplies.
- **Player guidance:** Bring a prepared group, RPG equipment, healing and recovery supplies. Use the Boss Codex and realm progression items to find and unlock encounters.

These are intended for late-game groups, with **4–6 equipped players recommended**. Regional bosses lead toward Astrael and the realm encounters, including Shadow King, Dragon Mother, Storm Griffin and Shadow Weaver. Recover and reposition between attacks; a player's best damage window is not their sustained damage for the entire fight.

Boss	Base HP	Base armor	Base healing per second
Sylvaron	7,000	16	10 HP
Aureon	8,000	14	10 HP
Nekhraz	9,000	18	11 HP
Varkhul	10,000	20	12 HP
Morvath	11,000	16	13 HP
Elyndra	12,000	18	14 HP
Shadow King	14,000	20	16 HP
Dragon Mother	15,000	20	17 HP
Storm Griffin	14,500	18	16 HP
Astrael	18,000	22	19 HP
Shadow Weaver	20,000	22	20 HP

Each additional active participant adds **15% of base health**, **10% of base healing** and **10% of base armor**, up to eight participants. These bonuses add together rather than multiply repeatedly. Four participants mean **1.45× health** and **1.30× healing/armor**. Armor remains capped at 30 points. Party size does not increase outgoing boss damage or attack rate, and leaving does not reduce a fight's reached scaling.

Combat regeneration begins after ten seconds and pauses during scripted invulnerability. Major attacks have warning time; overlapping boss damage is limited, but staying in hazards or fighting while already injured remains dangerous. Bosses can pressure ranged attackers and challenge pillars, walls and narrow hiding places. Prolonged unreachable positioning triggers warned eruptions and, if it continues, a separately warned move to a checked open arena position. These responses do not destroy buildings. A wipe or abandoned fight resets the encounter.

Rewards are personal and participation-based, including recorded damage, tanking or healing an engaged ally. Standing nearby alone does not qualify. Contributors who die before the clear receive their pending rewards after returning alive. Use the cache to receive its full guaranteed supply package; the pack replaces the upstream random gear reel.

Encounter tier	Regular golden apples	Netherite ingots	Totems	Diamonds	Experience bottles
Sylvaron / Aureon / Nekhraz	4	1	1	8	32
Varkhul / Morvath / Elyndra	6	2	1	12	48
Shadow King / Dragon Mother / Storm Griffin	8	3	1	16	64
Astrael / Shadow Weaver	10	4	2	24	96

Required progression drops remain available, with existing trophies and tiered vanilla XP. Each player's first clear of Astrael and first clear of Shadow Weaver also grants one Nether Star. **Enchanted golden apples and World Bosses combat gear are excluded from raid rewards.** Shrines and altars recover for 30 minutes.

Worldbreaker and Shadowbreaker weapons, tools, armor and shields are retired, along with their gear upgrades. Existing copies convert into the matching vanilla netherite item or vanilla shield when loaded, retaining supported enchantments and names while losing the retired gear's special modifiers. Continue using the pack's RPG equipment progression. Codices, ritual items, portal materials and noncombat collectibles remain.

Official mod page

Gateway of Doom

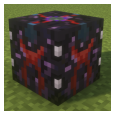

- **Type:** Boss encounter
- **Core mechanic:** Opens four themed Gateways with timed waves, 20 custom mobs, and Runeroot, Reaper, Voidwing, or Azure Ronin as the final boss.
- **Player guidance:** Find a Gateway Key in dimension-appropriate loot, throw it on open ground, and watch the wave timer and boss bar.

The new wave AI periodically shares pressure among nearby players and can switch toward an attacker; bosses also consider distance and damage dealt. This pack's repack excludes players downed by PlayerRevive or Better Revive from target selection, so active teammates can draw aggro. Finish the timed waves and final boss for the encounter reward; Hell Wards can prevent new Gateways from opening near a base.

Official mod page

Major fights range from shrine rituals to timed waves. Scout the arena, set a retreat and respawn route, and carry recovery supplies before triggering a ritual or summoning item. Follow the live boss bar and arena cues when multiple mods affect the same encounter.

Invasions and wave events

Invasion

- **Type:** Event and defense
- **Core mechanic:** Starts increasingly difficult Nexus-defense events whose attackers can build, dig, and adapt to the terrain.
- **Player guidance:** Build a defense site away from valuable storage before placing a Nexus.

Attackers can bridge, dig, and build toward the objective. Leave a fallback path and test the encounter with repair supplies ready.

Official mod page

Illager Invasion

- **Type:** Event and defense
- **Core mechanic:** Adds new illager combat and support roles to raids and places others in structures.
- **Player guidance:** Expect more roles in raids and structure fights.

The new illagers change how a group encounter develops. Identify support enemies before focusing only on damage dealers.

Official mod page

It Takes a Pillage

- **Type:** Event and defense
- **Core mechanic:** Adds pillager encampments, fortresses, patrol threats, and related rewards.
- **Player guidance:** Scout camps and fortresses before closing in.

New pillager locations add threats during ordinary exploration. Mark an exit and clear the perimeter before collecting rewards.

Official mod page

> Invasion centers on a defended Nexus, while the illager mods expand raids and hostile outposts. Choose a prepared defense site with clear sight lines and a fallback route; some attackers can alter the terrain, so valuable storage should sit outside the likely combat area.

Dangerous nights and environmental threats

Withered Lands

- **Type:** Environmental threat
- **Core mechanic:** Makes exploration more hostile through wither-themed enemies, behaviors, encounters, and rewards.
- **Player guidance:** Approach its themed structures and enemies cautiously.

Its creatures and rewards belong to a wider hostile ecosystem. Use Jade to identify unfamiliar targets before entering a site.

Official mod page

The Graveyard

- **Type:** Environmental threat
- **Core mechanic:** Adds graveyard-themed locations, enemies, atmosphere, and adventure rewards.
- **Player guidance:** Light and scout a graveyard location before entering.

These structures are adventure sites with connected enemies and loot. Keep a retreat route rather than treating them as scenery.

Official mod page

Blood Moon

- **Type:** Environmental threat
- **Core mechanic:** Replaces every fourth full moon with an Overworld event that strengthens hostile mobs, increases phantom pressure, and prevents sleeping through the night.
- **Player guidance:** Shelter or leave the Overworld; a bed cannot skip the event.

Hostile pressure rises during the special night. Plan a safe return before dark rather than relying on sleep.

Official mod page

The Darkness Will Find You

- **Type:** Environmental threat
- **Core mechanic:** Adds a progression-based Deep Dark curse that can make night, sleep, dark dimensions, sculk spread, and hostile events increasingly dangerous until the player pursues its protection and resolution systems.
- **Player guidance:** Read the curse's current effects and clues.

The threat can grow with progression and make familiar dark places more dangerous. Follow its protection and resolution path before treating the effects as permanent background difficulty.

Official mod page

Armored Foes

- **Type:** Environmental threat
- **Core mechanic:** Lets more hostile mob families spawn wearing visible equipment and makes illagers equip armor during raids.
- **Player guidance:** Inspect visible enemy gear before engaging.

Equipped mobs may survive longer or deal more damage than expected. Raids can include armored illagers as well.

Official mod page

Somnora

- **Type:** Environmental threat
- **Core mechanic:** Replaces the instant night skip with accelerated world time, including visible sky and weather progression, multiplayer-aware sleeping, plant growth, and configurable ambience.
- **Player guidance:** Expect sleep to advance the world rather than instantly skip time.

The sky, weather, and plants can continue changing while players sleep. A failed sleep during another event may have a different cause.

Official mod page

> Night hazards can come from a moon event, a growing curse, stronger equipped enemies, or the surrounding structure. Blood Moons cannot be slept through, while ordinary sleep can still advance time under Somnora. Read current messages and effects before assuming two dangerous nights follow the same rules.

Structures and dungeons

Better Archeology

- **Type:** Archeology and exploration
- **Core mechanic:** Adds dig sites, fossils, and artifacts to the world.
- **Player guidance:** Bring a brush and inspect suspicious blocks before clearing a structure.

Its fossil and artifact route is explained in the featured guide. New sites appear in unexplored terrain.

Official mod page

Dungeons and Taverns

- **Type:** Structures and exploration
- **Core mechanic:** Adds taverns, ruins, camps, and dungeons throughout the world.
- **Player guidance:** Mark an entrance before descending into a new site.

The collection adds several kinds of Overworld exploration stop. Clear one area at a time and keep unusual loot.

Official mod page

Dungeons and Taverns overhauls

- **Type:** Structures and exploration
- **Core mechanic:** A collection of standalone structure updates: DnT Ancient City Overhaul, DnT Mineshaft Overhaul, DnT Pillager Outpost Overhaul, and DnT Stronghold Overhaul.
- **Player guidance:** Recheck familiar landmark types for changed layouts.

The installed modules update ancient cities, mineshafts, outposts, and strongholds. An old route through one of these structures may no longer apply.

Official mod page

Awesome Dungeon collection

- **Type:** Structures and exploration
- **Core mechanic:** Adds dungeon structures across the Overworld, End, and Ocean through Awesome Dungeon, Awesome Dungeon End Edition, and Awesome Dungeon Ocean Edition.
- **Player guidance:** Identify the dimension and dungeon theme before entering.

The collection spreads sites across the Overworld, End, and Ocean. Bring equipment suited to that location rather than one generic dungeon kit.

Official mod page

Epic Structures collection

- **Type:** Structures and exploration
- **Core mechanic:** Adds distinct villages, dungeons, igloos, witch huts, and jungle temples through five installed modules.
- **Player guidance:** Expect unfamiliar layouts at familiar structure types; scout entrances and carry a map marker.

The standalone Villages edition adds its towns separately from vanilla villages. Dungeons vary in size and rarity, large igloos can hide underground pieces, and the temple and hut modules reshape their own sites. The replacing Villages edition is not installed.

Official pages: Villages · Dungeons · Igloos · Witch Huts · Jungle Temples

When Dungeons Arise collection

- **Type:** Structures and exploration
- **Core mechanic:** When Dungeons Arise adds large, hostile dungeons and structures; Seven Seas extends the collection with ships and other ocean vessels.
- **Player guidance:** Scout the whole site and mark a safe return route before entering or boarding.

These sites can be much larger than a vanilla dungeon, with enemies and loot spread across several areas. Explore in stages and leave room to carry rewards back. Voltaic Shot is removed from this pack, including its special book and crossbow loot rolls.

When Dungeons Arise · Seven Seas

Hellish Trials

- **Type:** Nether structures and combat
- **Core mechanic:** Generates trial chambers in the Nether with trial spawners, vaults, Breezes, and wind-charge hazards.
- **Player guidance:** Bring fire protection and supplies for repeated combat before opening a vault.

The chambers turn a Nether detour into a sustained trial rather than a quick loot stop. Watch the room's spawners and terrain before committing to a fight.

Official mod page

Moog's structure collection

- **Type:** Structures and exploration
- **Core mechanic:** Adds exploration sites across dimensions through Moog's Bountiful Structures, Moog's End Structures, Moog's Nether Structures, Moog's Ocean Structures, Moog's Temples Reimagined, and Moog's Voyager Structures.
- **Player guidance:** Use maps and landmarks to track the many site types.

Its modules place structures across several dimensions and biomes. Keep an exit route when a site overlaps other hostile content.

Official mod page

Sky Village-Islands

- **Type:** Structure expansion
- **Core mechanic:** Adds floating village islands linked by bridges.
- **Player guidance:** Explore new terrain and prepare a safe route up.

New village layouts and mostly vanilla chest loot appear in newly generated chunks.

Official mod page

Towns and Towers

- **Type:** Structures and exploration
- **Core mechanic:** Expands villages, pillager outposts, and ships while keeping a vanilla-like style.
- **Player guidance:** Revisit villages and outposts for expanded layouts.

Settlements and ships keep a familiar style while offering new places to explore. Check for services as well as loot.

Official mod page

Explorify

- **Type:** Structures and exploration
- **Core mechanic:** Adds lightweight exploration structures designed to blend with vanilla generation.
- **Player guidance:** Treat small sites as useful landmarks on longer routes.

Its lightweight structures blend into ordinary terrain. Mark them on the map when they help navigate a region.

Official mod page

ATi Structures

- **Type:** Structures and exploration
- **Core mechanic:** Places fantasy and medieval structures above and below ground, with custom loot in the installed main edition.
- **Player guidance:** Check chests and guarded rooms rather than assuming familiar blocks mean familiar rewards.

This main edition replaces the Vanilla Edition in the pack. Its structures share much of the same layout, but this edition keeps the author's custom loot and encounters.

Official mod page

Much More Dungeons

- **Type:** Structures and exploration
- **Core mechanic:** Adds more dungeon layouts and exploration targets.
- **Player guidance:** Carry spare light and a return marker into deeper layouts.

More dungeon destinations increase the chance of finding rewards off a planned route. Keep inventory space for unknown items.

Official mod page

Towers of Chambers

- **Type:** Structures and exploration
- **Core mechanic:** Turns trial chambers into large, vertical combat towers.
- **Player guidance:** Prepare for a vertical trial-chamber fight.

Height changes both retreat and enemy approach. Secure each level before climbing farther.

Official mod page

Underground Villages

- **Type:** Structures and exploration
- **Core mechanic:** Generates functioning villages below ground.
- **Player guidance:** Search below ground for functioning settlements.

These villages bring trade and shelter into caves. Check their entrances and protect villagers from nearby hostile spawns.

Official mod page

Stoneholm

- **Type:** Structures and settlements
- **Core mechanic:** Adds sprawling underground villages with halls, rooms, and villagers.
- **Player guidance:** Search below ground for connected settlement corridors and secure a route back to the surface.

Stoneholm is a separate installed mod from Underground Villages, so both can generate different subterranean settlements.

Official mod page

Ocean Lily Pad Village

- **Type:** Structures and exploration
- **Core mechanic:** Generates villages built across the ocean surface.
- **Player guidance:** Approach the surface settlement by a safe water route.

The village's ocean placement changes how players arrive and leave. Keep a boat or other return option nearby.

Official mod page

Antique Trading Ship

- **Type:** Structures and exploration
- **Core mechanic:** Places a discoverable villager trading ship in ocean biomes.
- **Player guidance:** Inspect the ship and its traders before unloading cargo.

A travelling trade destination can be useful during ocean exploration. Compare offers before spending rare materials.

Official mod page

Hopo Better Underwater Ruins

- **Type:** Structures and exploration
- **Core mechanic:** Replaces small underwater ruins with larger and more interesting sites.
- **Player guidance:** Bring air and light for larger ruins.

The expanded sites reward a deliberate underwater search. Keep a surface marker so exploration does not become a navigation problem.

Official mod page

Improved Village Placement

- **Type:** Structures and exploration
- **Core mechanic:** Chooses terrain that produces more natural village layouts.
- **Player guidance:** Look for villages fitted more naturally to their terrain.

The mod changes where settlements sit in the landscape. Approach paths and nearby hazards still vary by biome.

Official mod page

Yggdrasil

- **Type:** Structures and exploration
- **Core mechanic:** Places large and small themed structures with lore and rewards across the world.
- **Player guidance:** Treat the larger sites as expeditions; mark your entry point and read clues before taking rare loot.

Its several mega structures offer longer exploration than an ordinary ruin. Keep inventory space and a return route when following a structure deeper.

Official mod page

Gazebos

- **Type:** Structures and exploration
- **Core mechanic:** Adds village gazebos that contain small spell libraries.
- **Player guidance:** Check village gazebos for spell libraries.

A small structure can be a useful magical resource. Revisit settled areas when assembling a new class loadout.

Official mod page

Structure mods, including the new Epic Structures modules, ATi Structures, Stoneholm, and Yggdrasil, provide destinations rather than a fixed linear route. Mark the entrance, identify a retreat path, and keep unknown keys, maps, templates, and named components until their use is clear. A familiar building can still contain enemies and rewards from other installed mods.

Creatures and hostile mobs

Shroomcraft

- **Type:** Creatures and encounters
- **Core mechanic:** Adds mushroom creatures, crops, colorful shroomwood, and connected survival content.
- **Player guidance:** Identify creatures and crops before using them.

Its mushrooms connect combat, cultivation, food, and building. Not every unusual mushroom creature is hostile or decorative.

Official mod page

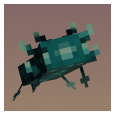

Alex's Mobs

- **Type:** Creatures and encounters
- **Core mechanic:** Adds a large roster of real and fantasy creatures with distinct behaviors and rewards.
- **Player guidance:** Watch a new creature before approaching or attacking.

The roster mixes real and fantasy behavior. Some animals have useful interactions or rewards beyond simple drops.

Official mod page

More Axolotl Variants Mod

- **Type:** Creature variety
- **Core mechanic:** Adds more visual variants of axolotls.
- **Player guidance:** Look for new axolotl appearances while exploring water habitats.

The variants make collected axolotls easier to distinguish. The installed More Axolotl Variants API supplies the underlying variant support.

Official mod page

Animal Garden collection

- **Type:** Creatures and encounters
- **Core mechanic:** Adds the Animal Garden: Bull Shark, Animal Garden: Capybara, Animal Garden: Fennec Fox, Animal Garden: Harp Seal, Animal Garden: Hippopotamus, Animal Garden: Lion, Animal Garden: Narwhal, Animal Garden: Owl, Animal Garden: Prairie Dog, Animal Garden: Red Panda, Animal Garden: Red River Hog, Animal Garden: Spotted Hyena, Animal Garden: Springhare, and Animal Garden: Yellow Mongoose wildlife modules.
- **Player guidance:** Observe wildlife before trying to tame or fight it.

The modules add many species with different habitats and behavior. Treat each encounter on its own terms.

Official mod page

Ender Zoology

- **Type:** Creatures and encounters
- **Core mechanic:** Adds hostile mobs designed to feel like extensions of the vanilla roster.
- **Player guidance:** Prepare for unfamiliar hostile variants in their habitats.

These enemies extend the ordinary mob roster without replacing it. Watch their attack pattern before closing distance.

Official mod page

Lullaby's Mobs

- **Type:** Creatures and encounters
- **Core mechanic:** Adds additional custom hostile creatures.
- **Player guidance:** Identify new hostile creatures with Jade.

Added mobs can change the danger of a familiar route. Keep space to retreat until their behavior is known.

Official mod page

Mutants and Zombies

- **Type:** Creatures and encounters
- **Core mechanic:** Adds stronger mutant zombie enemies.
- **Player guidance:** Avoid treating mutant zombies like ordinary undead.

Stronger variants may require more room and supplies. Clear nearby small enemies before committing to the fight.

Official mod page

Moblets

- **Type:** Creatures and encounters
- **Core mechanic:** Adds small and baby variants of existing mobs.
- **Player guidance:** Expect small variants of familiar mobs.

A smaller model does not necessarily make an encounter harmless. Check its name and behavior before approaching.

Official mod page

Mounts and Monsters

- **Type:** Creatures and encounters
- **Core mechanic:** Adds rideable creatures and new monsters.
- **Player guidance:** Identify whether a new creature is rideable or hostile.

The mod expands both travel and combat encounters. Secure a safe area before experimenting with a mount.

Official mod page

Craftable Creatures Evolution

- **Type:** Creatures and encounters
- **Core mechanic:** Makes mobs and mob spawners obtainable through crafting-based progression.
- **Player guidance:** Inspect crafting progression before producing mobs or spawners.

Its recipe path can create encounters as well as resources. Build an enclosed test area first.

Official mod page

Ribbits

- **Type:** Creatures and encounters
- **Core mechanic:** Adds social frog-like villagers to swamps.
- **Player guidance:** Approach swamp settlements as social encounters.

These frog-like villagers add interaction to swamp exploration. Look for trade or community behavior before attacking.

Official mod page

Guard Ribbits

- **Type:** Creatures and encounters
- **Core mechanic:** Adds armed protectors for Ribbit settlements.
- **Player guidance:** Recognize armed Ribbits as settlement protectors.

Their role is to defend the local group. Avoid drawing hostile mobs into the village.

Official mod page

Guard Villagers

- **Type:** Creatures and encounters
- **Core mechanic:** Adds armed defenders to ordinary villages.
- **Player guidance:** Let defenders handle threats around a settlement when possible.

Armed villagers change the way raids and night attacks unfold. Help them without blocking their route.

Official mod page

Goblin Traders

- **Type:** Creatures and encounters
- **Core mechanic:** Adds wandering goblins with unusual trades.
- **Player guidance:** Check the offered trade before spending rare items.

Wandering goblins are merchants rather than ordinary enemies. Their unusual offers may suit a specialized build.

Official mod page

Party Creepers

- **Type:** Creatures and encounters
- **Core mechanic:** Replaces destructive creeper damage with a decorative party-style explosion.
- **Player guidance:** Watch the altered explosion before assuming ordinary creeper damage.

Their party-style effect changes a familiar threat. Give them room until the local behavior is clear.

Official mod page

> Observe unfamiliar creatures before approaching; Jade identifies them and JEI lists known drops.

Part IV — Survival and Creation

Survival turns collected resources into repeatable systems. Gathering provides materials, farms and kitchens turn them into supplies, storage keeps the result accessible, and building or logistics makes the base easier to use. Start with a reliable food and storage loop, then add specialized workstations, transport, and faster construction when the need appears. The right tool depends on whether the job is portable, local to a base, or shared with other players.

Recipes and workstations matter more here than memorizing long item lists. Use JEI to inspect the desired output and its actual station, then test a small batch before building an entire production line. Controls that affect bulk actions are noted where they help: OneKeyMiner uses `C`, Effortless Building: Sophisticated opens its radial menu with Alt, and an equipped backpack opens with V.

Resource gathering and repetitive actions

OneKeyMiner

- **Type:** Gathering utility
- **Core mechanic:** Adds vein mining, crop harvesting, and automatic replanting.
- **Player guidance:** Hold C for a short trial and watch tool durability.

A chain still consumes the relevant tool's durability and follows server limits. Stop before the tool reaches a risky threshold. Chains are disabled while PvP combat flagged.

Official mod page

> OneKeyMiner makes repeated mining and farming actions faster, but it still spends tool durability and follows server limits. Try a short chain first, especially near valuable blocks or a tool close to breaking.

Farming, food, and cooking

Agritech

- **Type:** Farming automation
- **Core mechanic:** Planters grow crops and trees and store their harvests; raised beds provide a manual alternative, and crates collect nearby drops.
- **Player guidance:** Insert soil and a supported seed, then use a hoe to till compatible soil. Check Agritech's JEI categories for accepted combinations; cloches and fertilizer improve planters.

The installed version supports Farmer's Delight cabbage, tomato, onion and rice on Farmland or Rich Soil Farmland. Rice yields rice panicles. Expanded Delight's asparagus, chili pepper, peanut and sweet potato need additional Agritech recipes and are not currently supported in these growers.

Official mod page

Farmer's Delight

- **Type:** Food and farming
- **Core mechanic:** Expands farming, cooking tools, food preparation, meals, and kitchen-centered survival.
- **Player guidance:** Inspect a desired meal in JEI for its station and serving container.

Preparation, heating, and serving may be separate steps. Follow the station shown by the recipe instead of assuming a crafting-grid result.

Official mod page

Expanded Delight

- **Type:** Food and farming
- **Core mechanic:** Extends Farmer's Delight with additional crops, blocks, workstations, and functionality. Check JEI for each recipe's exact preparation station rather than assuming a new ingredient uses the vanilla cooking loop.
- **Player guidance:** Use JEI to identify its crops and workstation recipes.

The addition broadens Farmer's Delight's kitchen loop. Check the exact station instead of treating every new ingredient as a crafting-grid recipe.

Official mod page

Ocean's Delight

- **Type:** Seafood cooking
- **Core mechanic:** Adds squid, guardian and pufferfish ingredients, seafood dishes and a shareable Guardian Soup.
- **Player guidance:** Use a knife for eligible seafood drops, then follow JEI through cutting, cooking-pot and ordinary cooking recipes.

This pack includes a local Minecraft 26.2 port, compatible with Farmer's Delight and its supported Display Delight dishes.

Official mod page

Large Meals

- **Type:** Meals and feasts
- **Core mechanic:** Adds substantial meals and three four-serving feasts, including a roasted mutton rack.
- **Player guidance:** Place a feast to serve portions; check JEI for its ingredients, preparation station and bowl requirements.

This pack includes a local Minecraft 26.2 port, compatible with Farmer's Delight and its supported Display Delight dishes.

Official mod page

End's Delight

- **Type:** End cooking
- **Core mechanic:** Turns End ingredients into meals, drinks and shareable feasts, with an End Stove for six-slot cooking.
- **Player guidance:** Gather End ingredients and check JEI for cutting and cooking steps. Some foods have unusual effects, so inspect them before eating.

This pack includes a local Minecraft 26.2 port, compatible with Farmer's Delight and its supported Display Delight dishes.

Official mod page

Better Rotten Flesh

- **Type:** Food and farming
- **Core mechanic:** Adds useful ways to process and consume rotten flesh and new zombie-feeding behavior.
- **Player guidance:** Process rotten flesh before treating it as ordinary food.

The mod gives a poor resource more uses. Test zombie-related interactions away from livestock and villagers.

Official mod page

Universal Bone Meal

- **Type:** Food and farming
- **Core mechanic:** Makes bone meal work on a wider range of plants.
- **Player guidance:** Confirm a plant accepts bone meal before spending it.

More crops can be accelerated, but the item does not override every growth condition. Season and light can still matter.

Official mod page

No Crop Destruction

- **Type:** Food and farming
- **Core mechanic:** Prevents farmland and crops from being trampled during normal play.
- **Player guidance:** Keep farm paths organized even with trampling protection.

Ordinary movement is less likely to ruin planted land. Good lighting and crop conditions remain necessary.

Official mod page

> Food production now has several steps: grow or gather ingredients, prepare them at the proper station, cook them, and serve them. Farmer’s Delight and its additions do not make every workstation interchangeable, so inspect the desired dish in JEI and follow the recipe display.

Potions and alchemy

Alchemia

- **Type:** Potion and healing
- **Core mechanic:** Reimagines potion brewing as a simplified, Potion Craft-inspired alchemy system.
- **Player guidance:** Build an Alchemical Cauldron and record successful ingredient paths.

Each ingredient shifts the mixture on a radial effect map. Bottle the result only after confirming the intended effect and keep a record of successful paths.

Official mod page

FF Bandage

- **Type:** Potion and healing
- **Core mechanic:** Adds a consumable bandage crafted from 2 paper and 1 stick. It restores 1 or 2 hearts, depending on the mod's configuration, as a small direct-healing option.
- **Player guidance:** Carry a few for small, immediate healing needs.

A bandage offers direct recovery without a full potion setup. Its healing amount follows the installed configuration.

Official mod page

Potion Time Stacker

- **Type:** Potion and healing
- **Core mechanic:** Lets repeated potion effects extend their remaining duration.
- **Player guidance:** Watch the active effect timer after drinking another potion.

Repeated effects can extend their duration. Server settings control the cap and splash behavior.

Official mod page

Potions Stack

- **Type:** Potion and healing
- **Core mechanic:** Allows ordinary potions to stack in small groups.
- **Player guidance:** Group identical potions to save inventory space.

Stacks require matching item data. This improves carrying capacity without changing what a potion does.

Official mod page

> Alchemia's cauldron uses ingredient paths to discover effects, while ordinary potions and support mods handle a separate brewing and inventory loop. Record successful recipes, inspect the finished bottle, and watch actual effect timers when repeated potion use stacks duration.

Building and decoration

Macaw's building collection

- **Type:** Building
- **Core mechanic:** Adds coordinated bridges, doors, fences, furniture, decorations, lights, paintings, paths, roofs, stairs, trapdoors, and windows.
- **Player guidance:** Search JEI by module or material before choosing a block family.

The modules coordinate doors, bridges, furniture, roofs, windows, and more. Choose a palette first to avoid browsing every variant at once.

Official mod page

MrCrayfish's Furniture Mod: Refurbished

- **Type:** Furniture and home utilities
- **Core mechanic:** Adds decorative furniture, powered appliances, working mailboxes and computers.
- **Player guidance:** Start with its Workbench and use JEI to check furniture recipes and appliance requirements.

Build a furnished home with storage, seating, kitchen fittings and lights. The Workbench lists furniture recipes and can draw materials from your inventory, its storage and neighboring containers. Choose a recipe there before gathering a large batch of materials.

Appliances and electronics use the mod's electricity system. Set up an Electricity Generator and use the Wrench to connect compatible devices; check the device and JEI before expanding your setup. Mailboxes let players exchange items, while computers provide apps. Furniture can be decorative or functional, so inspect each block's interface rather than expecting every piece to behave alike.

Official mod page ? Official wiki

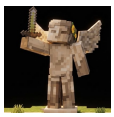

Display Delight

- **Type:** Building
- **Core mechanic:** Displays supported meals in 3D, with food recoverable for eating.
- **Player guidance:** Hold an original edible bowl or bottled meal and press C + right-click to display it. With an empty main hand, right-click to retrieve one food; C + right-click takes all food from a plate. C is the pack's Sneak key.

The pack's repaired port returns the original edible meal from a bowl display and leaves an empty plate after its last food is taken. Display Delight's creative-list food items are display blocks and place with ordinary right-click. Only foods supported by an installed add-on appear in JEI, creative/search lists or wandering-trader offers. Existing displays keep their saved IDs when an add-on is absent.

Official mod page

Functional Sculptures

- **Type:** Building
- **Core mechanic:** Adds a collection of craftable statues, monuments, and memorials for decorative builds.
- **Player guidance:** Choose a monument that fits the build's scale.

Craftable statues and memorials add focal points. Test a piece in a small area before repeating it across a base.

Official mod page

Armor Statues

- **Type:** Building
- **Core mechanic:** Unlocks detailed posing and customization for armor stands.
- **Player guidance:** Use its interface to pose an armor stand precisely.

Rotation, visibility, and alignment change the display without changing worn combat gear. Save a working pose before complex edits.

Official mod page

Stoneworks

- **Type:** Building
- **Core mechanic:** Adds building variants for vanilla stone families.
- **Player guidance:** Search stone variants by the base material.

The added shapes make a coherent palette easier to build. Check stonecutter or crafting routes in JEI.

Official mod page

Effortless Building: Sophisticated

- **Type:** Building
- **Core mechanic:** Replaces Effortless Building with shape placement, mirrors, arrays, survival material tracking and backpack building upgrades.
- **Player guidance:** Hold Alt for the radial menu and inspect the shape preview. The other six building controls are unbound in the recommended profile.

Hold a block, choose a shape, mark its points and inspect the live material preview before placing. Survival builds spend matching blocks. There is no separate axis-length cap. Placement reach is 1,000 blocks at every power tier, including Creative; old tier reach settings no longer restrict it. Survival batches allow 128 blocks per click initially, rising to 256, 512 and 2,048 with upgrades; Creative retains 10,000. Material costs still apply. Building Upgrades let the installed Sophisticated Backpacks supply materials. Choose Disable in the radial menu to return to ordinary placement and mining. Advanced building, breaking and undo/redo are disabled while PvP combat flagged; queued builds stop. Server permissions, batch limits and replacement rules still apply.

Official mod page

Pro Placer

- **Type:** Building
- **Core mechanic:** Improves precise placement, reach-based building, and bridging.
- **Player guidance:** Use it for precise single-block placement and bridging.

It complements bulk building when a large shape is too much. Test its reach and placement behavior before working over a drop.

Official mod page

Stonecutting Upgrade

- **Type:** Building
- **Core mechanic:** Expands the stonecutter interface, remembers recipes, and supports quick material refills.
- **Player guidance:** Use the refill controls in the stonecutter interface when materials are available.

The interface remembers recipes and offers a larger selection area. Its refill controls can prepare one item or a stack from materials you already have.

Official mod page

Arcane Lanterns

- **Type:** Building
- **Core mechanic:** Uses catalysts to give lanterns different magical area effects.
- **Player guidance:** Read a catalyst's effect before placing the lantern.

Some area effects help farms or movement; others affect nearby entities. Test the radius away from shared paths.

Official mod page

> This category ranges from small block families and furniture to large shape placement. Prototype a section before using Effortless Building: Sophisticated at scale; hold Alt for its radial menu and inspect the preview before confirming a placement near storage or redstone.

Storage and inventory management

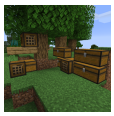

Sophisticated Backpacks

- **Type:** Storage
- **Core mechanic:** Adds upgradeable portable storage with functional upgrade slots.
- **Player guidance:** Press V to open an equipped pack and choose upgrades for its job.

A pack travels with the player and can also work as a placed container. Its upgrades add utilities rather than simply more slots. Sophisticated Backpacks are stored in Better Revive graves on death, even when equipped or carried on the hotbar.

Official mod page

Tom's Simple Storage

- **Type:** Storage
- **Core mechanic:** Joins ordinary containers into one searchable storage network.
- **Player guidance:** Connect containers to a terminal and test the searchable network.

A terminal searches connected inventories while the items remain in their containers. Test capacity and connections before expanding the network.

Official mod page

Linked Chests

- **Type:** Storage
- **Core mechanic:** Lets separate chests share an inventory.
- **Player guidance:** Label and test the ordered dye channel before storing valuables.

Chests with matching colors share inventory even when separated. A personal channel and portable pouch add different access options.

Official mod page

Easy Shulker Boxes

- **Type:** Storage
- **Core mechanic:** Allows shulker boxes to be used directly from the inventory.
- **Player guidance:** Open a packed shulker from inventory when checking supplies.

This saves repeated placement while travelling. It does not link distant storage or increase the box's capacity.

Official mod page

> Portable storage, connected base storage, linked inventories, and inventory shortcuts solve different problems. A backpack travels with the player, Tom's indexes connected containers, Linked Chests share a channel, and shulker access remains a local convenience. Label channels and test transfers with expendable items first.

Item transport and logistics

Golden Hopper

- **Type:** Logistics
- **Core mechanic:** Adds a hopper with configurable filtering behavior.
- **Player guidance:** Place a real filter item before trusting the route.

Its filter uses inventory space, so capacity and direction both matter. Test with expendable items first.

Official mod page

Hopper Gadgetry

- **Type:** Logistics
- **Core mechanic:** Adds more capable hopper controls and item-routing tools.
- **Player guidance:** Compare the filter, duct, and chute needed for the route.

Some pieces push, collect, or move items downward in different ways. Check direction before connecting a valuable store.

Official mod page

Sophisticated Inventory Interactions

- **Type:** Logistics
- **Core mechanic:** Brings search, sorting, and transfer controls to eligible container screens.
- **Player guidance:** Test sorting or transfer controls on a small container.

Supported screens gain faster inventory actions. A filtered transfer still depends on destination contents.

Official mod page

Sophisticated Item Actions

- **Type:** Logistics
- **Core mechanic:** Finds nearby inventories containing an item and supports direct restocking or depositing.
- **Player guidance:** Use a small test stack before depositing or restocking.

Nearby-inventory search can save time at a large base. Bulk actions should be checked for the intended filter and target.

Official mod page

> Hoppers and ducts route physical items, while Sophisticated controls act through inventory screens or nearby containers. Choose filters and directions deliberately, and test bulk transfer with disposable stacks before connecting valuable storage.

Vehicles and travel equipment

Seaworthy Boats

- **Type:** Travel equipment
- **Core mechanic:** Gives boats health and armor, then adds faster and tougher reinforcement tiers plus a shipyard repair loop.
- **Player guidance:** Watch boat health and use a Shipyard for repair.

Reinforcement can make a boat tougher and faster. Return to shore before damage strands an ocean journey.

Official mod page

Vehicle Upgrade

- **Type:** Travel equipment
- **Core mechanic:** Improves mount and vehicle behavior, including swimming, terrain handling, rider inventory access, mounted mining, and reduced wandering.
- **Player guidance:** Test a mount's new handling near the base.

Swimming, terrain movement, and rider interactions can change. Server configuration decides which conveniences are active.

Official mod page

> Seaworthy Boats gives boats a repair and reinforcement path, while Vehicle Upgrade changes how several mounts and vehicles behave. Check a boat's condition before crossing a large ocean and test mount handling locally before depending on it during an expedition.

Trading and multiplayer economy

Market Board

- **Type:** Multiplayer economy
- **Core mechanic:** Provides a shared multiplayer marketplace where players can list, buy, remove, and collect proceeds from item sales.
- **Player guidance:** Verify the item, quantity, and currency before posting a listing.

Sales are asynchronous player listings. Collect the proceeds through the board's management screen after an item sells.

Official mod page

> Market Board turns surplus items into asynchronous player listings. Browse comparable offers, verify the item, quantity, and server currency, then collect proceeds through the board's management interface. Creature traders remain separate direct interactions.

Part V — Interface and Reference

The interface is most useful when each layer has a clear job. Jade identifies a block or creature in front of you; JEI answers what an item makes or where it is used; tooltips explain the gear and food already in hand. Keep the permanent HUD for information needed while moving, such as position, health, and the party roster. Turning on every panel at once can cover the view during combat or building.

This section lists the installed information, recipe, and display tools as a quick reference. Use the mouse actions visible in JEI for recipes and uses, and consult Part VI before adding a shortcut that may conflict with another mod. Arrange HUD elements for the current GUI scale and resolution, then revisit the layout when a server scoreboard or larger party changes the available screen space.

Information overlays and tooltips

AppleSkin

- **Type:** Information interface
- **Core mechanic:** Visualizes hunger, saturation, exhaustion, and the food value of held items without changing those mechanics.
- **Player guidance:** Read the hunger and saturation preview before eating.

AppleSkin shows food value without changing the hunger rules. Compare meals before a long fight or expedition.

Official mod page

Jade

- **Type:** Information interface
- **Core mechanic:** Identifies the block or entity being looked at and displays relevant state information in an on-screen overlay.
- **Player guidance:** Aim at a target; use Numpad 1 for the overlay toggle if needed.

Its target overlay reports a block or entity's identity and available state. Open mod settings if a keyboard lacks the recommended numpad controls.

Official mod page

Effect Insights

- **Type:** Information interface
- **Core mechanic:** Adds readable descriptions to potion and food effects, including active effects viewed from the inventory.
- **Player guidance:** Read effect details before relying on a food or potion.

The tooltip explains status effects in a familiar place. Confirm duration and strength on the actual item.

Official mod page

Enchantment Insights

- **Type:** Information interface
- **Core mechanic:** Adds enchantment descriptions, levels, and optional technical details to tooltips and enchanting hints.
- **Player guidance:** Inspect unfamiliar enchantments on the current item.

Descriptions and level information help compare gear. Technical details can be expanded when a rule is unclear.

Official mod page

Food Effect Tooltips

- **Type:** Information interface
- **Core mechanic:** Shows the status effects supplied by a food before it is eaten.
- **Player guidance:** Read food effects before eating an unfamiliar meal.

A status effect may matter as much as hunger restoration. Compare the tooltip with AppleSkin's hunger preview.

Official mod page

Floating Damage Indicators

- **Type:** Information interface
- **Core mechanic:** Displays configurable, color-coded damage numbers for dealt and received damage.
- **Player guidance:** Compare several hits under the same conditions.

Color-coded values show damage during combat. One large number may hide slower attack timing or passive triggers.

Official mod page

Controlling

- **Type:** Information interface
- **Core mechanic:** Adds keybind search, conflict filtering, and a view of currently available keys to the Controls screen.
- **Player guidance:** Search Controls for an action or a conflicting key.

The conflict view helps explain a shortcut that does nothing. Leave unnecessary bindings unbound.

Official mod page

> Each information layer answers a different question: Jade identifies what is in front of you, item tooltips explain held gear, and food and effect helpers reveal costs or benefits before use. Keep only the overlays needed for the current task and use Controlling when a shortcut conflicts.

Recipe and loot information

Just Enough Items

- **Type:** Recipe and loot reference
- **Core mechanic:** Provides searchable item, recipe, and usage views.
- **Player guidance:** Left-click an item for recipes and right-click it for uses.

Use the search field to narrow the item list and the recipe transfer button when available. A transfer places owned ingredients but never creates missing ones.

Official mod page

JEI Trades

- **Type:** Recipe and loot reference
- **Core mechanic:** Adds villager trade information to the recipe browser.
- **Player guidance:** Inspect registered villager offers before travelling to trade.

Trade information appears beside the broader recipe reference. Actual offers still depend on the world and villager.

Official mod page

Just Enough Filters

- **Type:** Recipe and loot reference
- **Core mechanic:** Adds more ways to filter the item browser.
- **Player guidance:** Narrow a large JEI item list by the needed property.

Filtering makes exploration mods easier to browse. Clear the filter when a known item seems to disappear.

Official mod page

Universal Enchantment Info

- **Type:** Recipe reference
- **Core mechanic:** Adds enchantment descriptions, maximum levels, applicable items, incompatibilities, and availability flags to JEI.
- **Player guidance:** Use JEI's recipe action on an enchanted book for its details, or its uses action on equipment to inspect applicable enchantments.

This client-only reference explains existing enchantments; it does not change their effects or compatibility rules. Its panels can scroll when an enchantment has many applicable items.

Official mod page

Advanced Loot Info

- **Type:** Recipe and loot reference
- **Core mechanic:** Shows detailed loot-table and trade information in the recipe browser.
- **Player guidance:** Review loot and trade information while planning a target.

The installed ALI 2.4.0 and ALICompat 1.3.0 extend the loot reference to supported third-party systems. Advanced Core Info 1.5.0 supplies their shared data support. Actual results still depend on the world's registered loot tables.

Official mod page

Advanced Worldgen Info

- **Type:** Recipe and loot reference
- **Core mechanic:** Shows where world-generation features and resources can appear.
- **Player guidance:** Check where a configured resource or feature can appear.

AWI 1.3.2 runs on clients and servers with ALI and ACI. Initial collection can take several minutes; the pack owner reports about eight minutes for ALI. Wait for collection to finish before using its data.

Official mod page

Show My Recipes

- **Type:** Recipe and loot reference
- **Core mechanic:** Unlocks crafting recipes in the recipe book so players can discover what is available.
- **Player guidance:** Browse the recipe book for discoverable crafts.

The book becomes a broader reminder of available crafting paths. Use JEI when the exact workstation or ingredient relationship is unclear.

Official mod page

JEI is the main planning tool for items and recipes; left-click an item for its recipe and right-click it for uses. Its companion mods add trade, loot, filtering, and generation information. The cheat, edit, and developer shortcuts remain unbound in the recommended profile.

HUD changes and customization

Hovering Hotbar

- **Type:** HUD
- **Core mechanic:** Raises the hotbar from the screen edge with a configurable offset and optional experience-level placement.
- **Player guidance:** Use Up Arrow or Down Arrow to adjust its position.

The offset can free space near the bottom of the screen. Recheck it after changing GUI scale.

Official mod page

Overflowing Bars

- **Type:** HUD
- **Core mechanic:** Compresses health, armor, and armor-toughness values beyond vanilla limits into layered bars with readable counters.
- **Player guidance:** Read the layers and counters when stats exceed vanilla limits.

RPG gear can push health or armor past the ordinary bar. Extra layers represent capacity, not a separate resource.

Official mod page

Paper Doll

- **Type:** HUD
- **Core mechanic:** Adds a configurable, action-aware player model to the HUD.
- **Player guidance:** Place its player model before arranging the coordinate panel.

Action-based visibility can show the model during movement and gliding. Scale it so it does not cover tooltips or combat cues.

Official mod page

A readable HUD keeps position and character status near the left edge and the party roster on the right. Arrange Paper Doll first, then place Coordinates Display beneath it with Ctrl + N; open Better Party from its inventory button to adjust its roster. Recheck spacing after a GUI-scale or resolution change.

Cosmetic and animation changes

Emotecraft

- **Type:** Social animation
- **Core mechanic:** Plays character emotes and organizes favorites in a quick-select wheel.
- **Player guidance:** Client installs include 352 emotes from thirteen bundled packs automatically, each in its own folder. Bundled translations provide English names and descriptions when the game language is English. Press `G`, open All Emotes, and assign favorites to wheel slots. Add personal custom files to the instance's `emotes` folder, outside the installer's `Mods Server Pack` subfolder; pack repairs can replace files within that subfolder. Existing wheel assignments are preserved.

Includes the client-only Borrow Their Emote add-on: assign Borrow Emote in Controls, then use that combination while looking at an emoting player and stop crouching to join. Borrow Emote is currently unbound; Reverse Sound uses `Left Ctrl`. Other players need compatible emote support to see the animation; the main mod is also installed on the server for sharing.

Emotecraft | Borrow Their Emote | Translations

Armor Hider

- **Type:** Client-side cosmetic display
- **Core mechanic:** Hides selected armor pieces and elytra on your client without unequipping them or removing their protection.
- **Player guidance:** Press `K` to open Armor Hider, then choose the pieces and whether to affect yourself or all players.

Helmets start hidden for all players in this mod's default settings. Choose Off to restore normal visibility; your settings do not change what another player's client renders.

Official mod page

SimpleHats Lite

- **Type:** Cosmetic
- **Core mechanic:** Wear hats in functional or cosmetic Curios Head, Face, or Hat slots; the pack's fix allows layered vanity looks. Grab bags and dyes add variants.
- **Player guidance:** Use functional or purple vanity Head, Face, and Hat slots.

Vanity placement supports layered looks without replacing useful headgear. A functional slot still follows the hat's own gameplay effects.

Official mod page

Distinct Potions

- **Type:** Cosmetic
- **Core mechanic:** Gives potion categories clearer names, colors, and bottle appearances so they are easier to distinguish.
- **Player guidance:** Compare potion names and bottle appearances before use.

Visual differences help distinguish categories in a crowded inventory. Read the effect tooltip for the actual result.

Official mod page

Punchy

- **Type:** Client-side animation feature
- **Core mechanic:** Adds fluid first-person hand and held-item animations with in-hand physics.
- **Player guidance:** Tune the visual settings in the mod's in-game configuration screen if an animation obscures an action.

Punchy changes presentation on each player's client without changing server combat rules. Its local 26.2 repair and the revised Modded Swords x Punchy! mappings are client-only extras. RPG weapons follow the animated hands; skills keep their original Spell Engine motions, then return to Punchy. Press `I` to inspect the held item. Client installs enable Punchy's Better Combat compatibility automatically and back up existing configs; other settings are preserved. Remove old RPG item blacklist entries to use the mappings.

Official mod page

Quick Skin

- **Type:** Cosmetic
- **Core mechanic:** Adds in-game skin, model, and cape management without returning to the launcher.
- **Player guidance:** Adjust the skin, model, or cape in game.

Appearance changes no longer require a launcher round trip. Preview the result before returning to play.

Official mod page

PatPat

- **Type:** Cosmetic
- **Core mechanic:** Adds a friendly player-to-player and player-to-creature pat interaction.
- **Player guidance:** Hold Left Ctrl and right-click a supported player or creature with an empty main hand to pat them.

Pat uses `Left Ctrl + Right Mouse Button` in the recommended controls. Plain right-click keeps normal creature interactions, including horse riding and taming. The binding can be changed in Controls.

Official mod page

Enhanced Cats

- **Type:** Creatures / cosmetic
- **Core mechanic:** Adds animated cat models and expands cat behavior.
- **Player guidance:** Tame and care for cats as usual; the replacement adds new animations and interactions.

Enhanced Cats replaces the former Cute Cats / Kingdom Cats Replacer. Both client and server use the supplied 26.2 build.

Official mod page

> Cosmetic mods change how characters and items look and how players interact socially. SimpleHats Lite can use vanity Curios slots, and Punchy adds first-person animation on the client. Skin, potion, cat, and pat effects have their own visual roles.

Optional client features

Advancements Reloaded

- **Type:** Optional client interface
- **Core mechanic:** Expands the advancements screen with stable tab ordering and searches across advancements and their criteria.
- **Player guidance:** Press `B` to open Advancements, then search for an objective or inspect its missing criteria.

This replaces the client screen without adding new advancement objectives. Use it to find progression requirements from the installed content mods; its settings control layout, colors and ordering.

Official mod page

AmbientSounds

- **Type:** Optional client audio
- **Core mechanic:** Adds environmental soundscapes that respond to surroundings and biomes.
- **Player guidance:** Use its client sound settings when an ambient layer is too loud.

This client-store extra changes atmosphere only. It does not need to be installed on the dedicated server.

Official mod page

Sound Physics Remastered

- **Type:** Optional client audio
- **Core mechanic:** Changes sound attenuation, absorption, and reverberation through surrounding blocks.
- **Player guidance:** Listen for the changed acoustic cues in caves and enclosed rooms; tune the client audio settings to taste.

The effect depends on the space around a sound. It is a client-store extra rather than a new gameplay system or server dependency.

Official mod page

Coordinates Display

- **Type:** Optional client feature
- **Core mechanic:** Shows the player's coordinates and related navigation information on a configurable HUD.
- **Player guidance:** Use `N` to toggle the display, `Ctrl + N` to change its position, and `Ctrl + Y` to open its GUI for other display options.

Choose a compact mode that preserves the navigation details you use. Reposition it after changing GUI scale.

Official mod page

Iris

- **Type:** Optional client feature
- **Core mechanic:** Enables shader-pack support.
- **Player guidance:** Manage shader packs in Video Settings; the reload shortcut is unbound in this profile.

Shaders change rendering rather than world mechanics. Disable a pack first when investigating a visual problem.

Official mod page

Sodium

- **Type:** Optional client feature
- **Core mechanic:** Replaces the renderer to improve frame rate and reduce rendering stutter.
- **Player guidance:** Use its video options when adjusting performance.

The renderer can improve frame rate and reduce stutter. Pair settings with the display and shader workload actually in use.

Official mod page

These client-side options affect navigation, rendering, ambience, and acoustics. Configure coordinates for useful detail, manage shaders through Iris, and adjust AmbientSounds and Sound Physics Remastered in client settings.

Part VI — Keybinds and Configuration

These tables reflect the recommended controls profile. `C` is assigned to both Sneak and OneKeyMiner's hold action, while `B` opens Advancements and the Better Party shortcut is unbound. Resolve any overlap you dislike in **Options** → **Controls** → **Key Binds**. To clear a binding, click it and press **Esc**; Minecraft will show **Unbound**.

Essential keybinds and conflict resolution

Follow the categories from top to bottom. A blank **Recommended key** means **Unbound**. The recommended profile uses `T` for skills, `M` for the world map, `N` for coordinates, and `G` for the emote wheel. Better Party and Curios open from inventory buttons.
